NAME: SHANTHOSH S
ROLL NO:240701487

ASSIGNMENT 07
BANK LOAN APPLICATION REPORTS SUITE
REPORT TYPES USE CASE

Zoho Creator | Report Configuration and Visualization

1. Aim

To design and build a complete suite of reports in Zoho Creator for the existing Bank Loan Application Form, demonstrating the nine Report Types: List View, Spreadsheet View, Kanban View, Calendar View, Map View, Timeline View, Pivot Table, Chart View, and Summary View.

2. Problem Statement

A single default list cannot meet every stakeholder's needs. Loan officers need to update verification and approval statuses, the callback team needs a daily schedule, the credit team needs a geographic view of applicants, and branch management needs summaries and trends for planning.

3. Scope of the Use Case

- Application Name: Loan Application & Pre-Screening Management
- Base Form: Loan_Application_Form
- Primary Users: Loan Officers, Callback Team, Credit Assessment Team, Branch Management
- Deliverable: Nine purpose-built reports, one for each Zoho Creator Report Type
- Objective: Provide each stakeholder a report format suited to their decision-making needs

4. Report Types Used and Their Mapping

The following table maps each Report Type in the assignment to its report name, purpose, and key configuration.

Report Type	Report Name	Purpose	Key Configuration
List View	All_Loan_Applications_List	Searchable list for quick browsing	Applicant Name, Loan Type, Monthly Income, Employment Type, Application Status; sort by submission date descending
Spreadsheet View	Loan_Applications_Spreadsheet	Grid for bulk status updates	Editable: Document Verification Status, Credit Check Status, Approval Status; grouped by Loan Type
Kanban View	Loan_Status_Kanban	Draggable cards by processing stage	Submitted / Document Verification / Credit Check / Approved / Disbursed / Rejected
Calendar View	Callback_Schedule_Calendar	Daily callback planning	Preferred_Callback_Time mapped to submission date; count callbacks per day
Map View	Applicant_Residential_Map	Regional applicant concentration	Residential_Address geocoded; pins coloured by Loan Type
Timeline View	Application_Activity_Timeline	Track submission volume over time	Application_Submitted_On; grouped by week
Pivot Table	LoanType_By_EmploymentType_Pivot	Compare loan type and employment category	Rows: Loan_Type; Columns: Employment_Type; Values: Count of Applications
Chart View	LoanType_Distribution_Chart	Visualize demand by loan product	Pie chart; segments: Loan_Type; values: count of applications
Summary View	LoanType_Amount_Summary	Summarize applications by loan type	Group by Loan_Type; count applications, sum and average Monthly_Income

5. Procedure — List View

The List View provides a searchable, row-based report of loan applications. It displays applicant name, loan type, monthly income, employment type, and application status, with recent submissions shown first.

Figure 1: List View of All Loan Applications

Procedure — Spreadsheet View

The Spreadsheet View arranges applications in a grid. Loan officers can update document verification, credit check, and approval status in bulk; other fields remain read-only.

Figure 2: Spreadsheet View for Verification and Approval Status

Procedure — Kanban View

The Kanban report groups applications by processing status. Cards show applicant name and loan type and can be moved between stages as the application progresses.

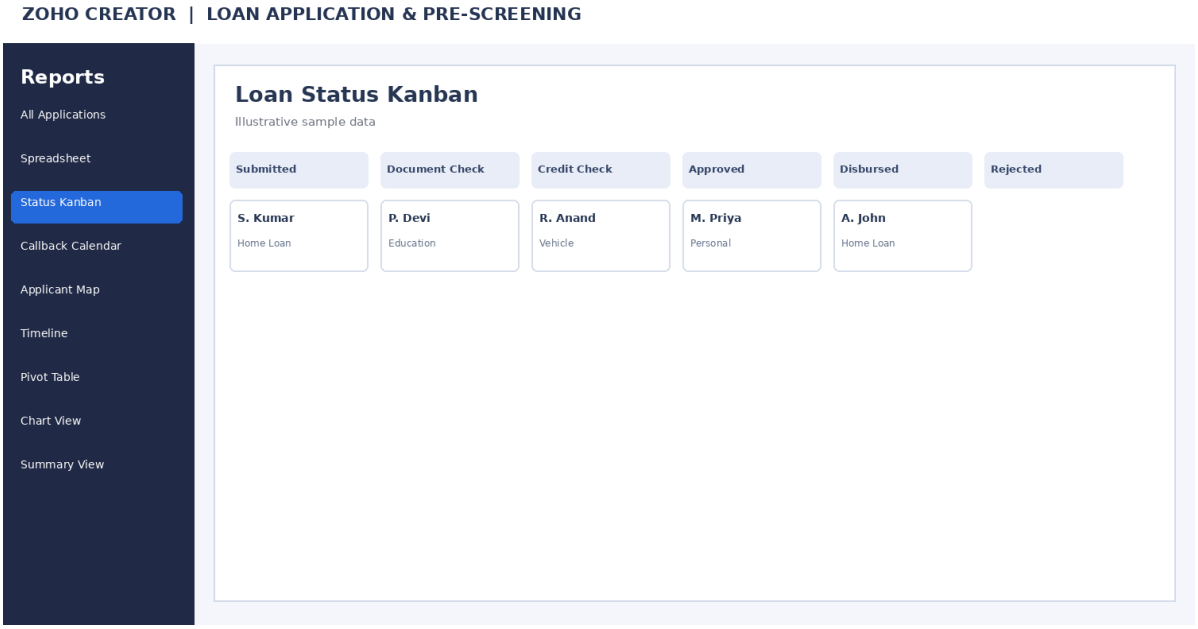

Figure 3: Kanban Board Grouped by Application Status

Procedure — Calendar View

The Calendar View helps the callback team plan daily calls. It uses the callback schedule mapped to the application submission date and shows callback counts in date cells.

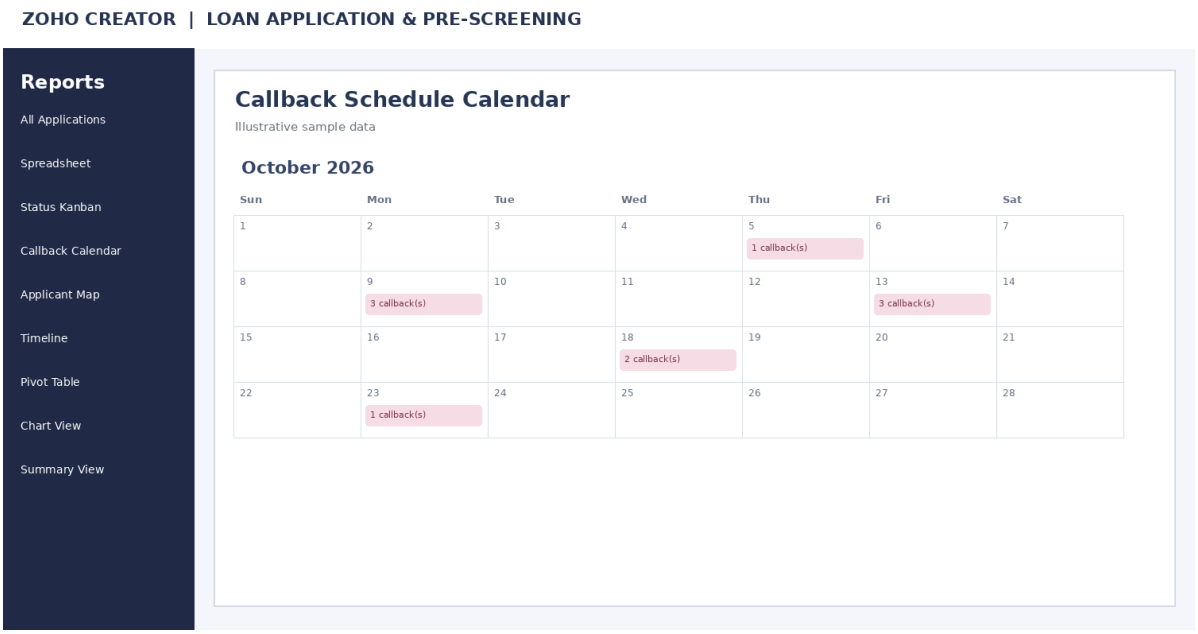

Figure 4: Callback Schedule Calendar

Procedure — Map View

The Map View plots residential addresses after geocoding. It helps the credit assessment team inspect regional concentration and identify areas that may require additional field verification.

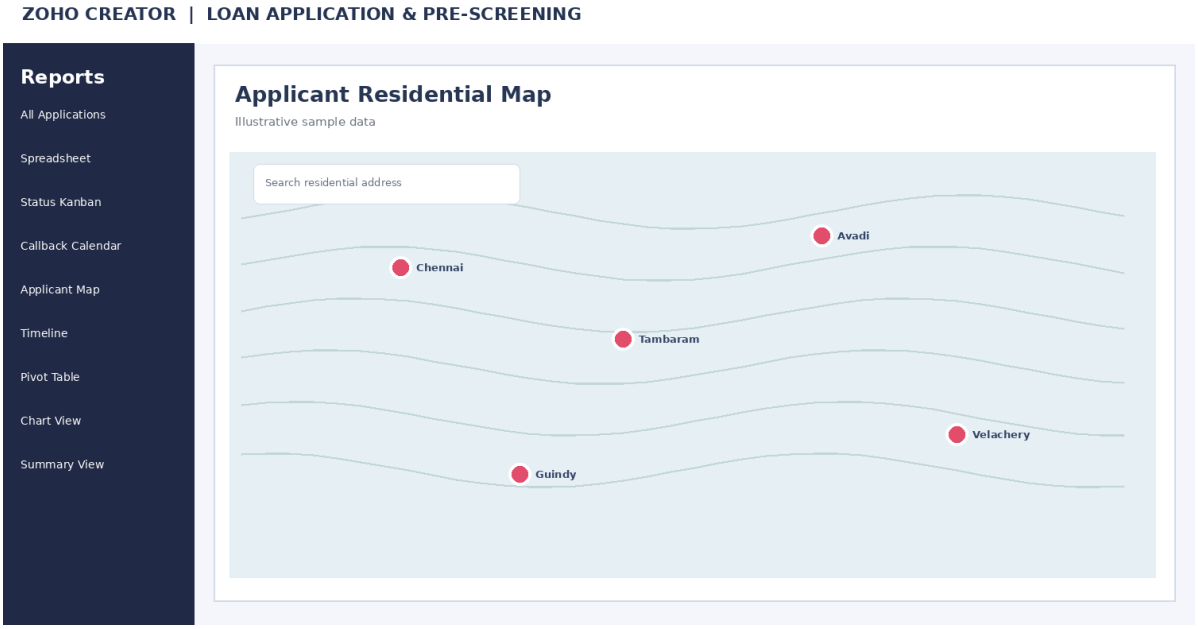

Figure 5: Applicant Residential Map — schematic illustration

Procedure — Timeline View

The Timeline View displays submissions along a time axis, grouped by week, so branch management can monitor application-volume trends and plan staffing.

Figure 6: Application Activity Timeline

Procedure — Pivot Table

The Pivot Table cross-tabulates Loan Type against Employment Type and counts applications. It helps compare salaried and self-employed applicant distribution across loan products.

Figure 7: Loan Type by Employment Type Pivot Table

Procedure — Chart View

The Chart View uses a pie chart to visualize the count of applications for each loan type, helping management identify the products in highest demand.

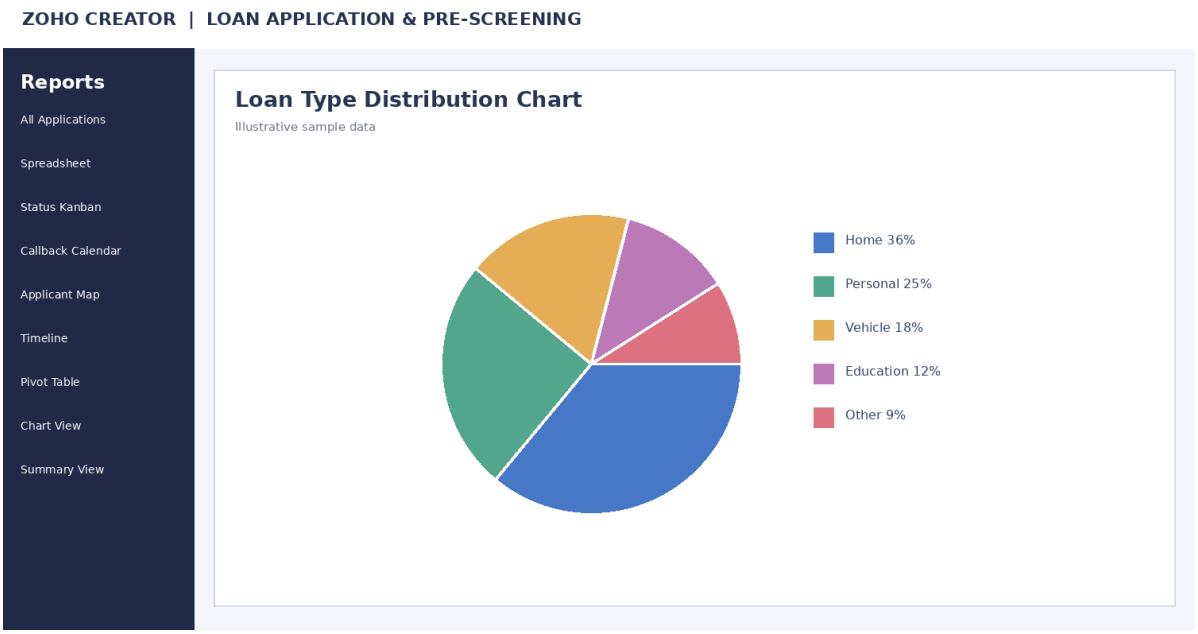

Figure 8: Loan Type Distribution Chart — illustrative pie chart

Procedure — Summary View

The Summary View groups applications by loan type and presents application counts plus the sum and average of monthly income, formatted as INR where applicable.

Figure 9: Loan Type Amount Summary

6. Report-wise Configuration and Validation Rules

- List View: sort by Application Submitted On in descending order and include filters for Loan Type, Employment Type, and Application Status.
- Spreadsheet View: restrict editing to the Loan Officer role; only document verification, credit check, and approval status columns are editable.
- Kanban View: movement between columns updates the underlying Status field and records a timestamp.
- Calendar View: show the current week's callbacks by default; clicking a date opens applicants scheduled for that day.
- Map View: enable geocoding for Residential_Address and use Loan Type to colour pins.
- Timeline View: use Application_Submitted_On and group submissions by week; refresh daily.
- Pivot Table: display blank cells as zero.
- Chart View: auto-refresh after a new application is submitted.
- Summary View: format currency-related totals in INR (₹) with two decimal places.

7. Workflow Summary

- Applicants submit records through Loan_Application_Form.
- Loan officers monitor new records through All_Loan_Applications_List and Application_Activity_Timeline.
- Officers track progress through Loan_Status_Kanban and update verification fields in Loan_Applications_Spreadsheet.
- The callback team uses Callback_Schedule_Calendar to plan calls.
- The credit assessment team uses Applicant_Residential_Map to review regional concentration.
- Branch management reviews the pivot table and chart to guide product strategy.
- Management uses LoanType_Amount_Summary for disbursal planning.

8. Expected Learning Outcomes

- Understand the purpose and correct use case for all nine Zoho Creator Report Types.
- Choose report types based on stakeholder decision needs.
- Configure grouping, sorting, and summary logic across views built on the same form.
- Understand how Kanban, Calendar, Map, Chart, and Timeline views support operational decisions.
- Use Pivot Table and Summary View for planning and resource allocation.

9. Deliverable and Result

The report design specifies all nine required report types for Loan_Application_Form, with report names, stakeholder purposes, configurations, and validation rules. To complete the practical exercise, build each report in Zoho Creator, populate sample data, and capture actual screenshots of each configured report, the report type selector, and at least one interaction such as opening a calendar date or moving a Kanban card.

Note: The figures included here are generated illustrative mockups, not screenshots from a live Zoho Creator account. Sample counts and values are illustrative only.
