LAB EXERCISE 11

PORTAL USER MANAGEMENT IN THE HOSPITAL MANAGEMENT SYSTEM

Objective

To create and configure a Portal User Management system in Zoho Creator for the Hospital Management System, allowing patients to access the portal through email invitations and password setup with the appropriate permission profile.

Procedure

1. Open the Hospital Management System application in Zoho Creator and navigate to the Portal section.
2. Start portal creation, select the Hospital Management System application and choose a suitable portal template.
3. Configure the portal authentication pages for sign-in, sign-up, password creation and password reset.
4. Add portal users by entering their names and email addresses, then assign the Patient permission profile.
5. Enable the invitation email option and send the portal invitation to the added user.
6. Follow the invitation link to create and confirm a password for portal access.
7. Open the Patient Registration form and review the fields used to collect patient information.

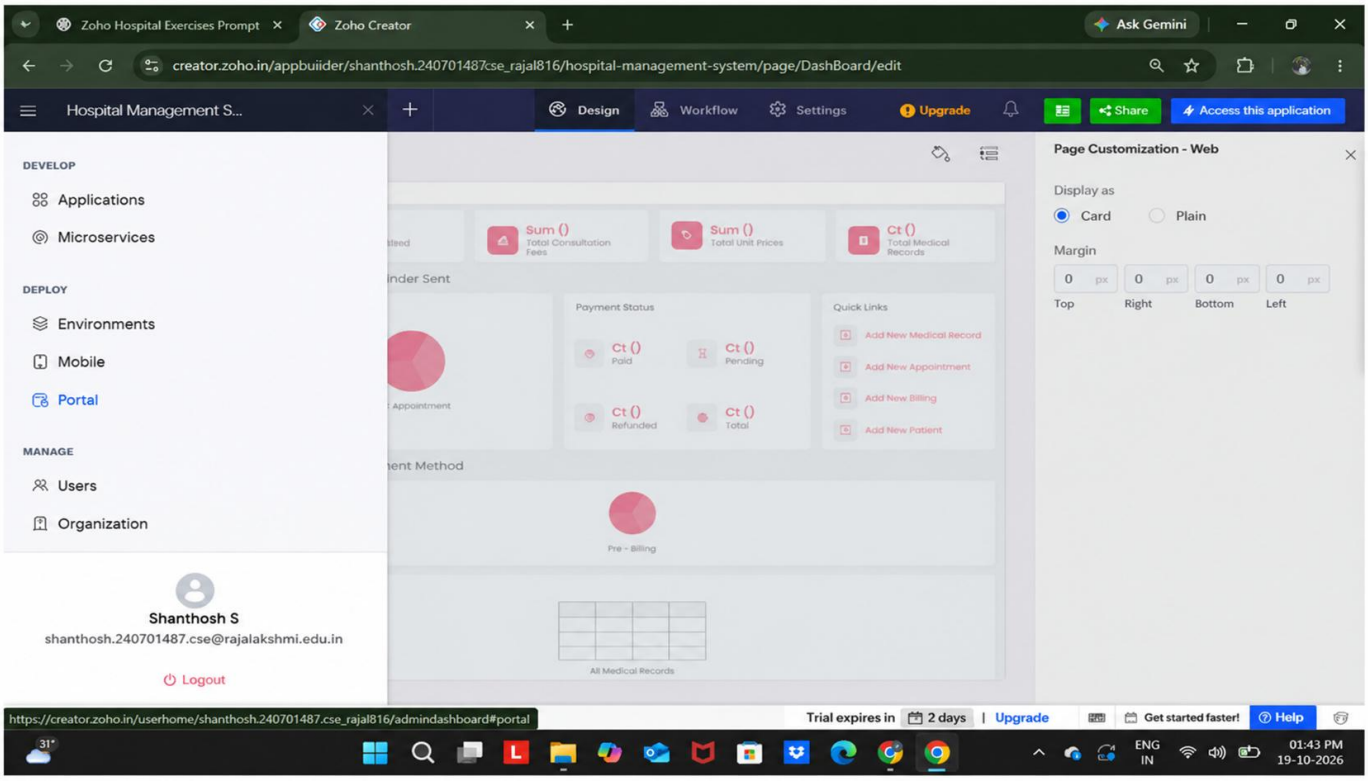

Figure 1

1. Create and Configure the Portal

In Zoho Creator, open the Hospital Management System application and enter the Portal area. The portal acts as an online entry point for patients. Configure the sign-in, sign-up, password creation and password reset pages to support account access and recovery.

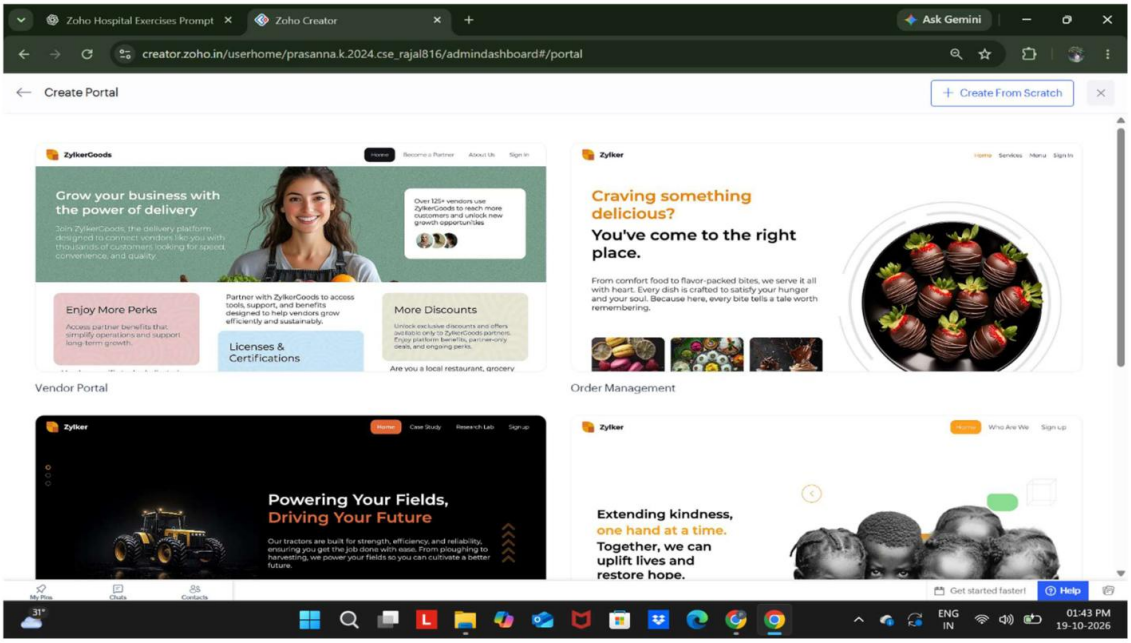

Figure 3

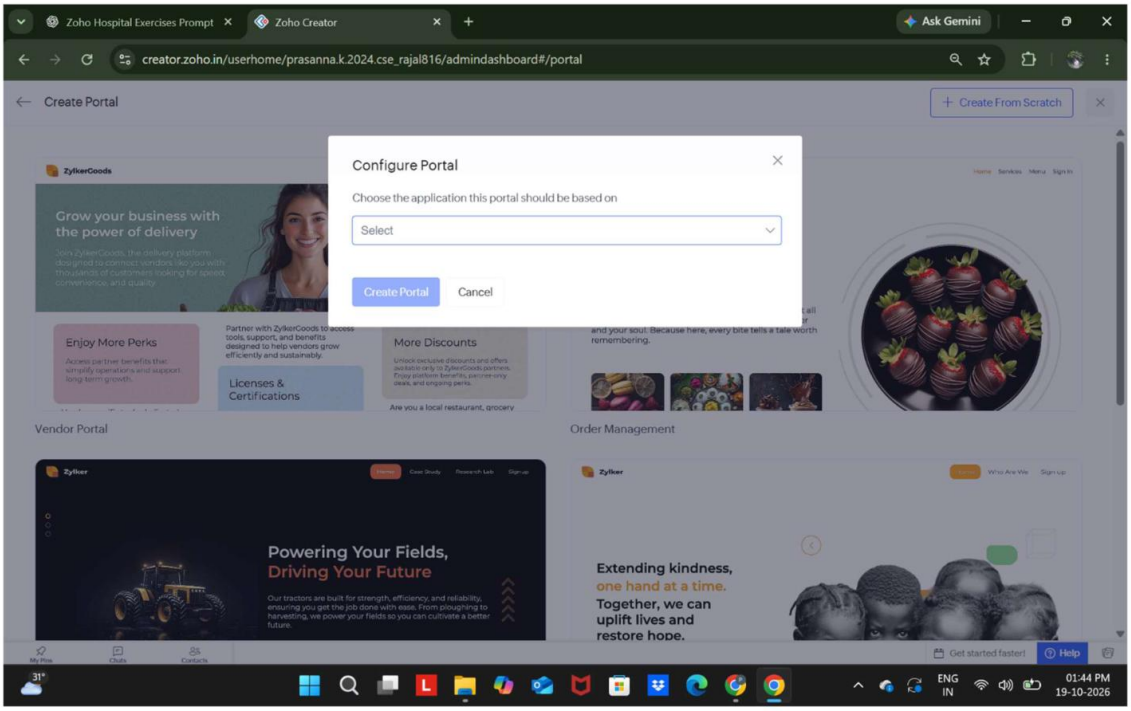

Figure 4

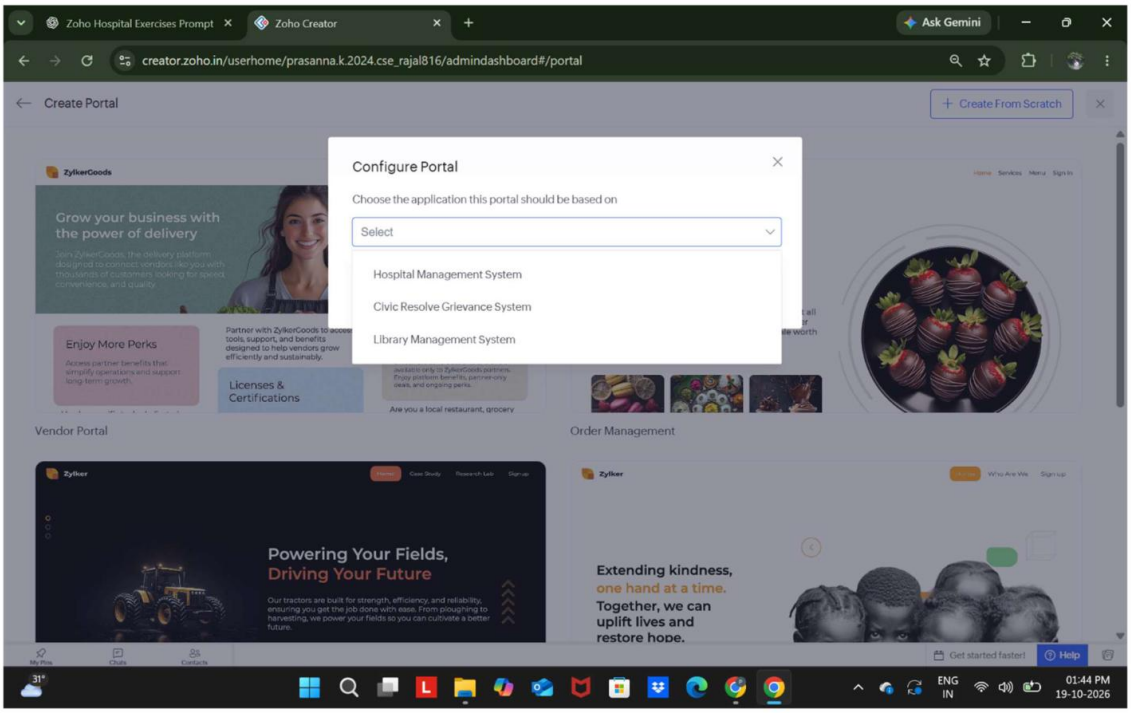

Figure 5

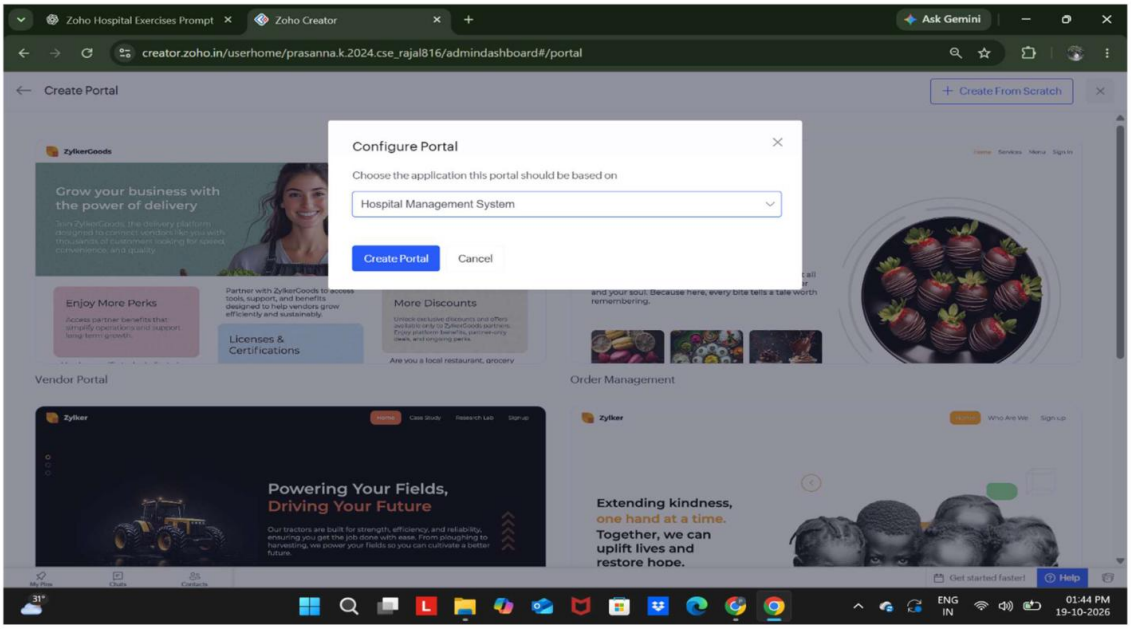

Figure 6

The portal setup begins from the application dashboard. The portal creation screen is opened and a suitable portal template is selected before choosing the application on which the portal will be based.

3. Configure Portal Authentication and Password Management

Set up the portal's authentication pages. The Sign Up page collects a name, email address and captcha. The Sign In page starts login using the registered email. The Create Password page allows a new user to enter and confirm a password, while Reset Password supports password recovery through the registered email address.

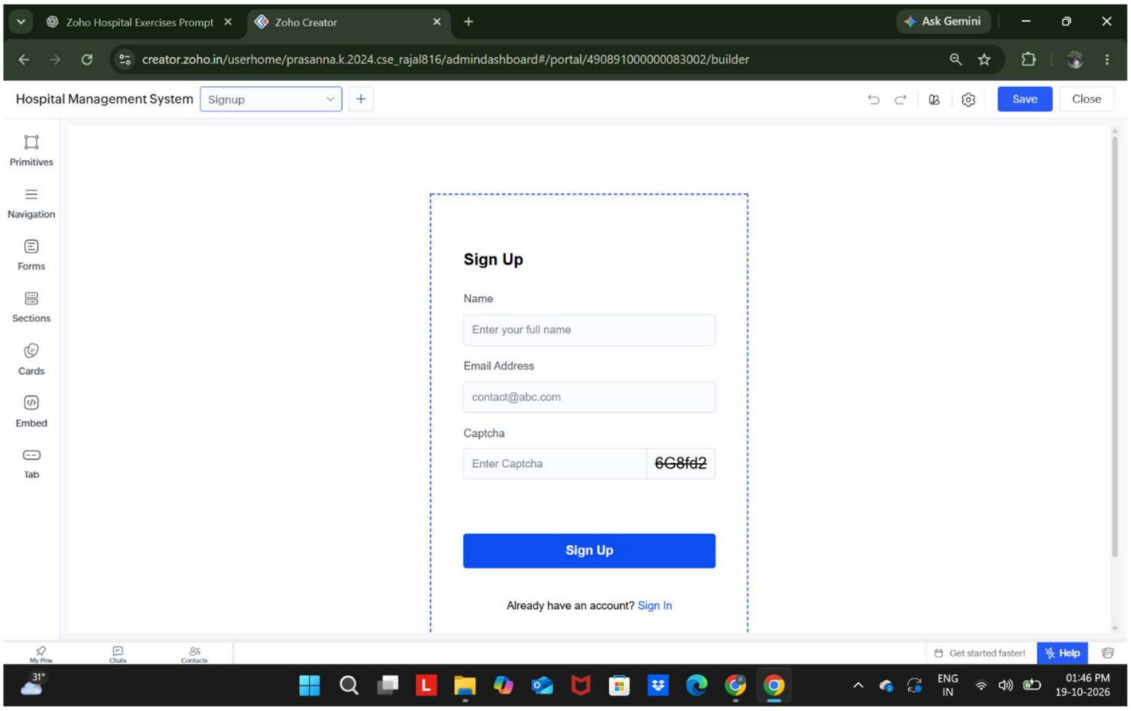

Figure 8

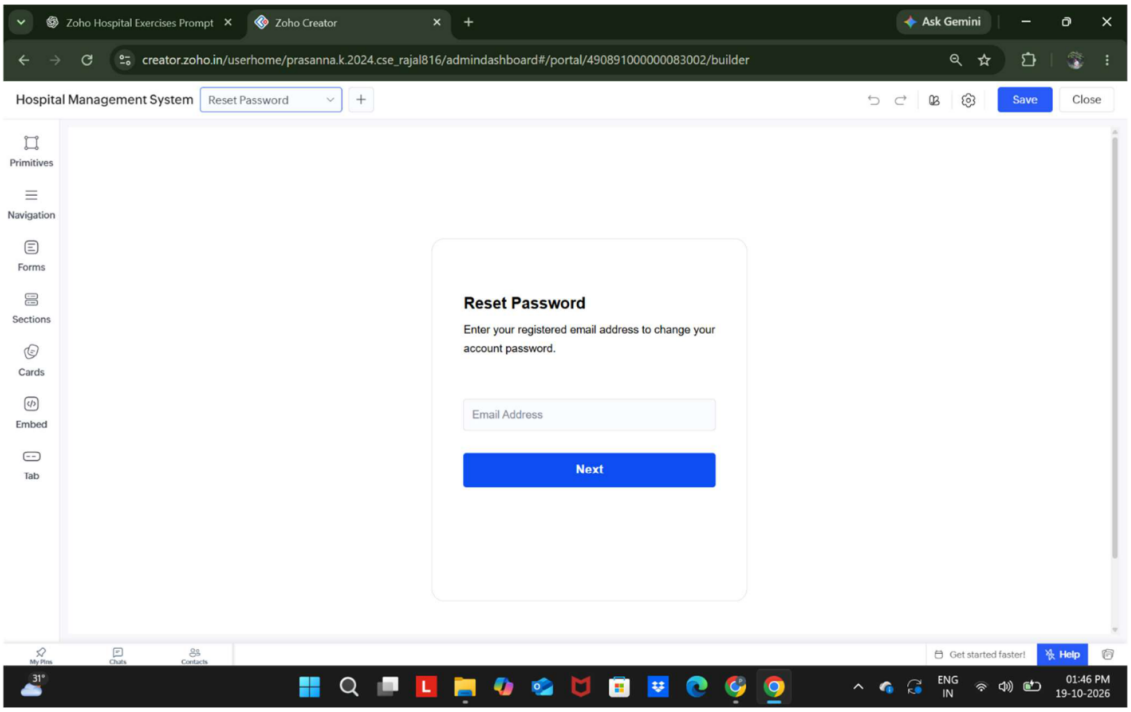

Figure 9

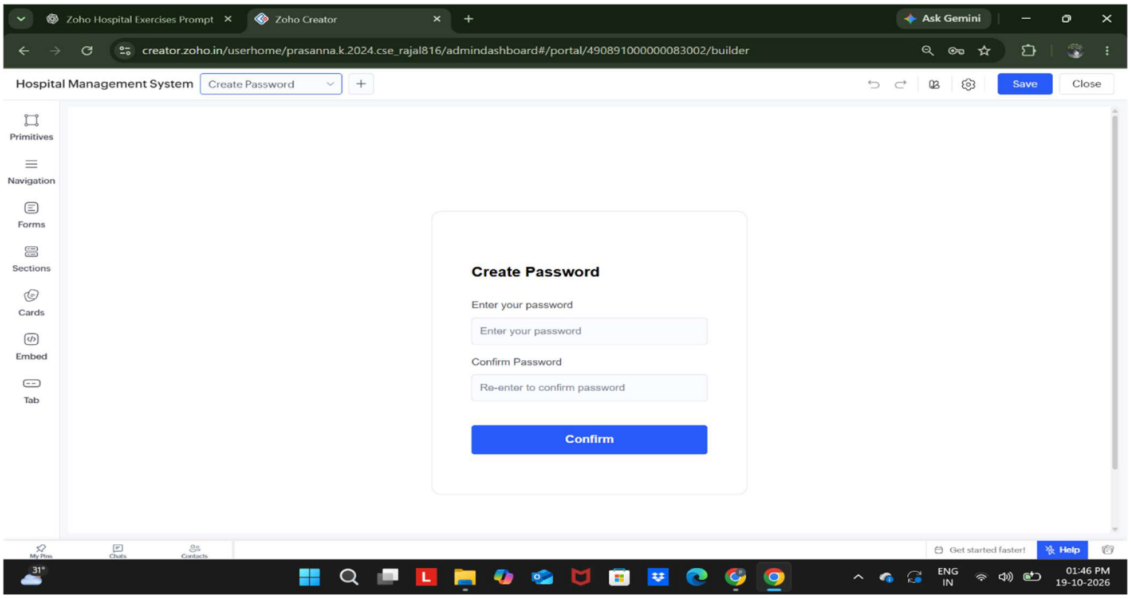

Figure 10

The authentication interface includes separate Sign In, Sign Up, Reset Password and Create Password pages. These screens provide the steps needed for registration, login and password recovery.

2. Add Portal Users and Assign Permissions

Portal users are registered by providing their names and email addresses. While adding each user, select the Patient permission profile so that access is governed by the role configured for patients. The notification email option can be enabled to send the invitation.

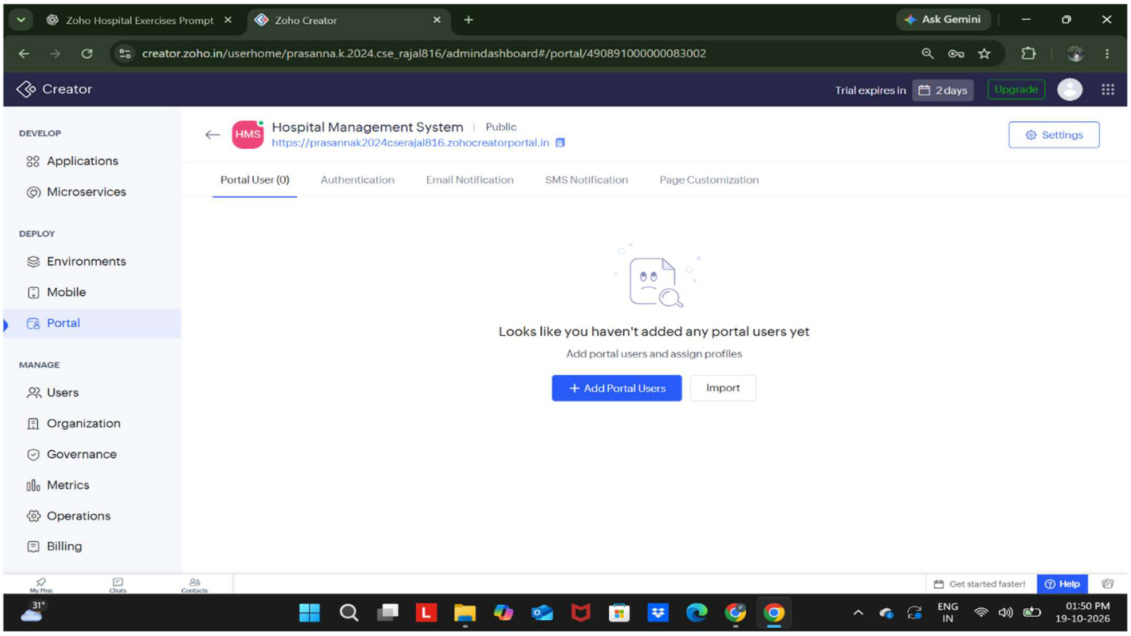

Figure 11

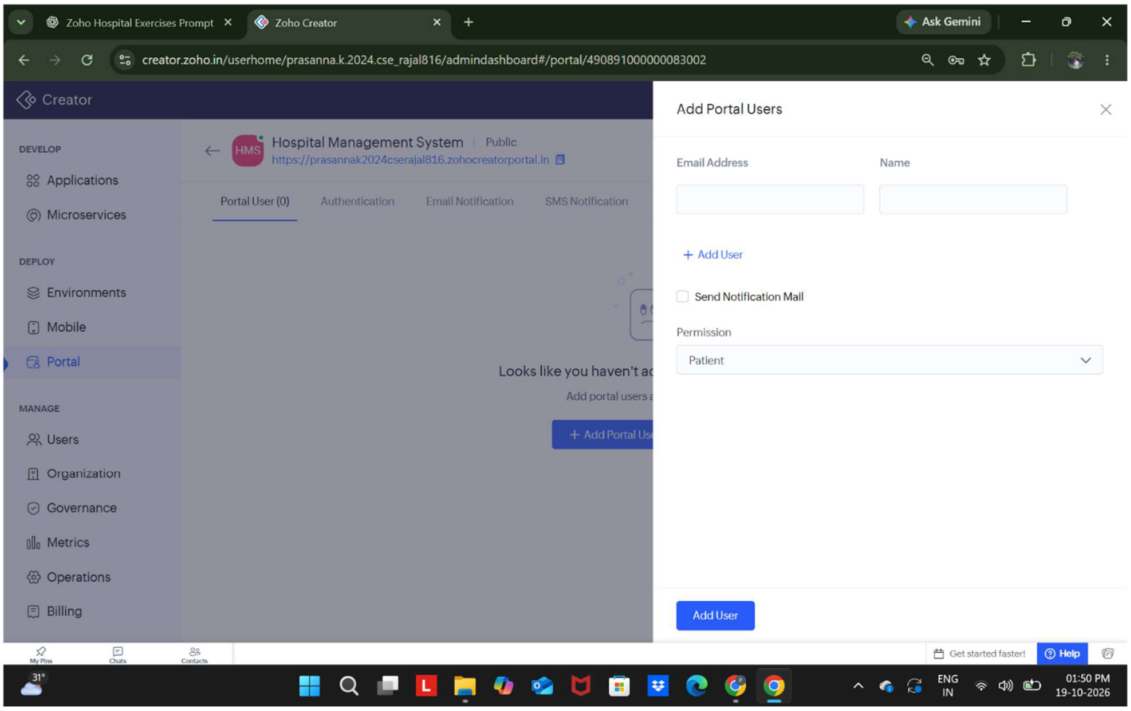

Figure 12

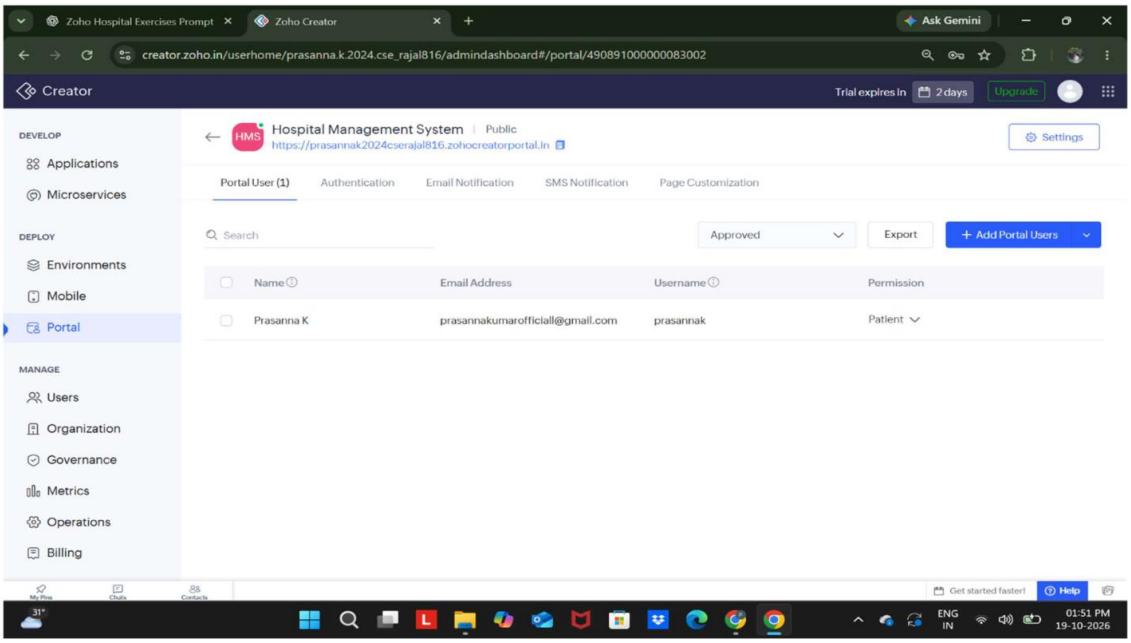

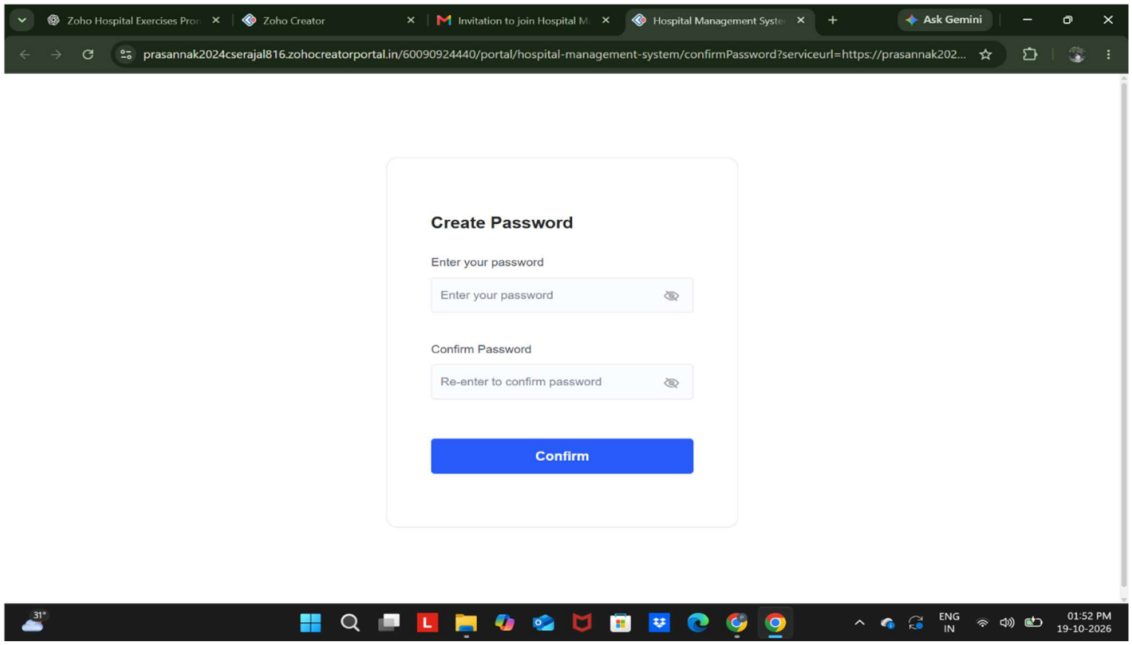

Figure 14

The Add Portal Users panel accepts the user's email address and name. The permission dropdown is set to Patient, and the notification email option is available to send the invitation.

4. Manage Portal Invitations and Patient Registration

After a portal user is added, an invitation is sent to the email address provided. The recipient follows the Create New Password link, enters and confirms a password, and confirms the setup. The Patient Registration form stores patient

details such as name, date of birth, gender, phone number, email, address, blood group, emergency contact, registration date and blood group code.

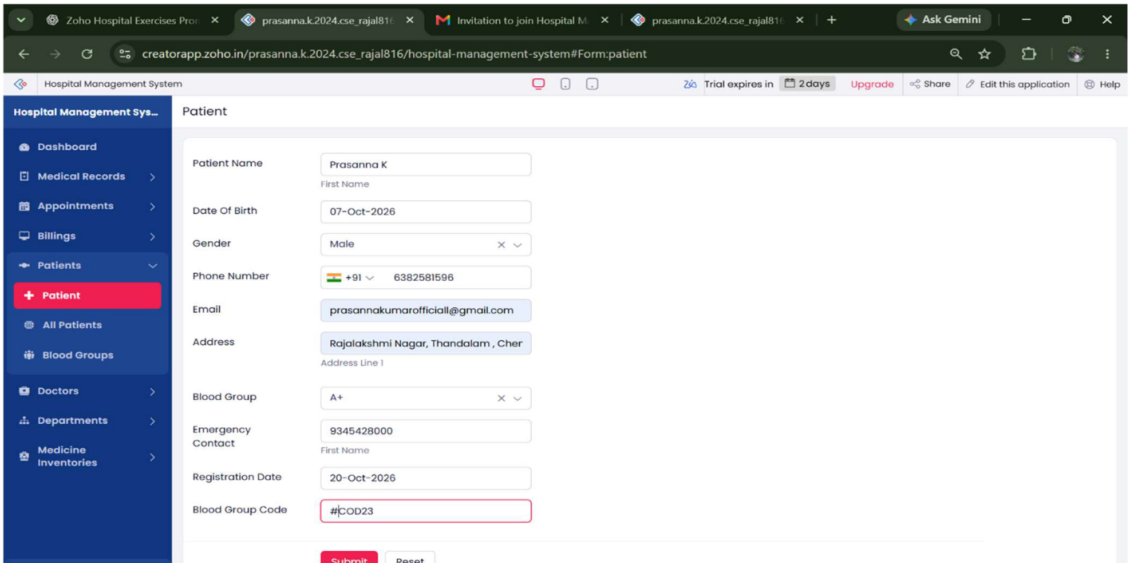

Figure 19

The portal user list displays the added account and its Patient permission. The invitation email provides a password setup link. After password creation, the Patient Registration form can be used to enter and submit patient information.

Result

The Portal User Management system was configured in Zoho Creator for the Hospital Management System. A portal was created, a patient user was invited by email, and the password creation process was completed. The Patient permission profile was assigned, providing portal access according to the configured role.
