ROLL NO: 240701487

CLASS ACTIVITY 01
HOSPITAL MANAGEMENT SYSTEM
FORM DESIGN AND DATA ORGANIZATION

Zoho Creator | Structured Form Creation

1. Aim

To design structured forms in Zoho Creator for recording hospital operations consistently, including patient details, appointments, admissions, staff, prescriptions, medicine inventory, billing, and room allocation.

2. Application Overview

The application is organized into ten forms, each responsible for one category of information. Lookup fields can connect records—for example, a patient with an appointment, admission, bill, or prescription. This structure helps avoid repeated data entry and makes records easier to retrieve.

3. Forms and Their Purpose

1. Appointment Form

Schedules visits by connecting a patient with a doctor and department. The date, time, reason, and status help staff manage the booking.

Main fields: Patient, Doctor, Department, Appointment Date, Appointment Time, Reason for Visit, Status.

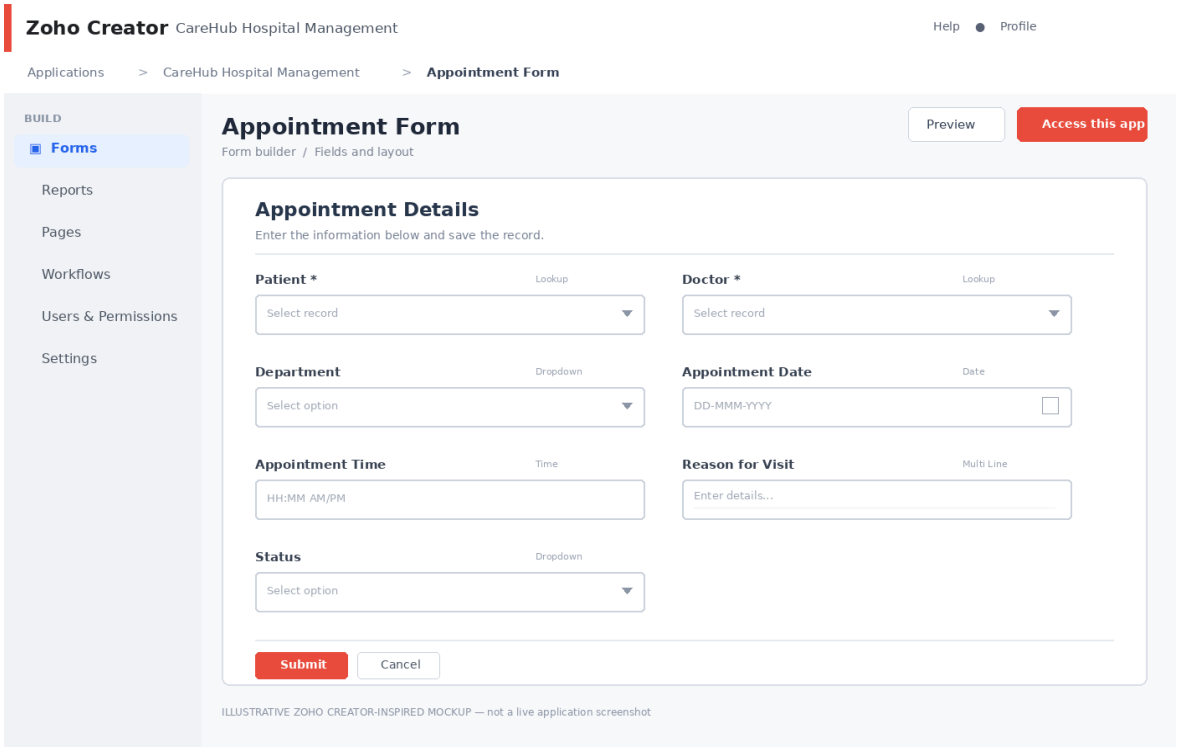

Figure 1: Illustrative Appointment form layout

2. Billing Form

Records charges associated with a patient visit or admission and supports payment tracking.

Main fields: Patient, Billing Source, Source Admission, Amount, Payment Status, Payment Date.

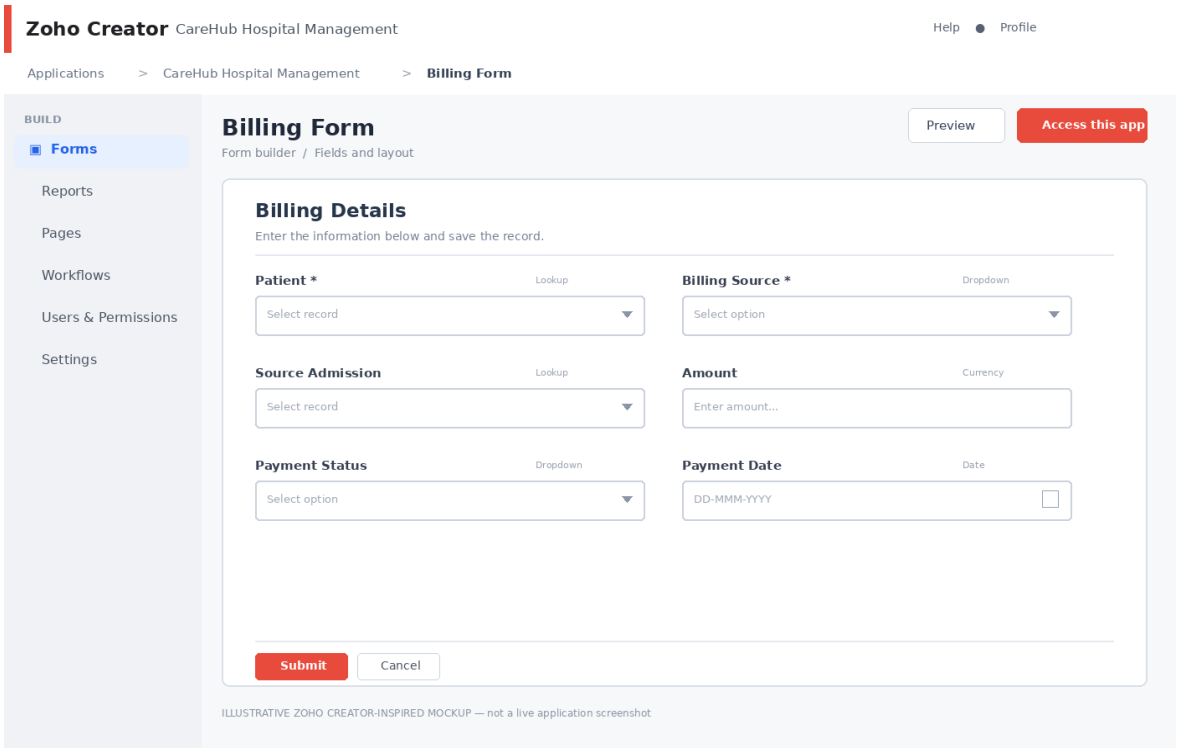

Figure 2: Illustrative Billing form layout

3. Admission Form

Maintains the patient's stay details, assigned doctor and room, dates, diagnosis, and admission status.

Main fields: Patient, Doctor, Room, Admission Date, Expected Discharge, Diagnosis / Notes, Admission Status.

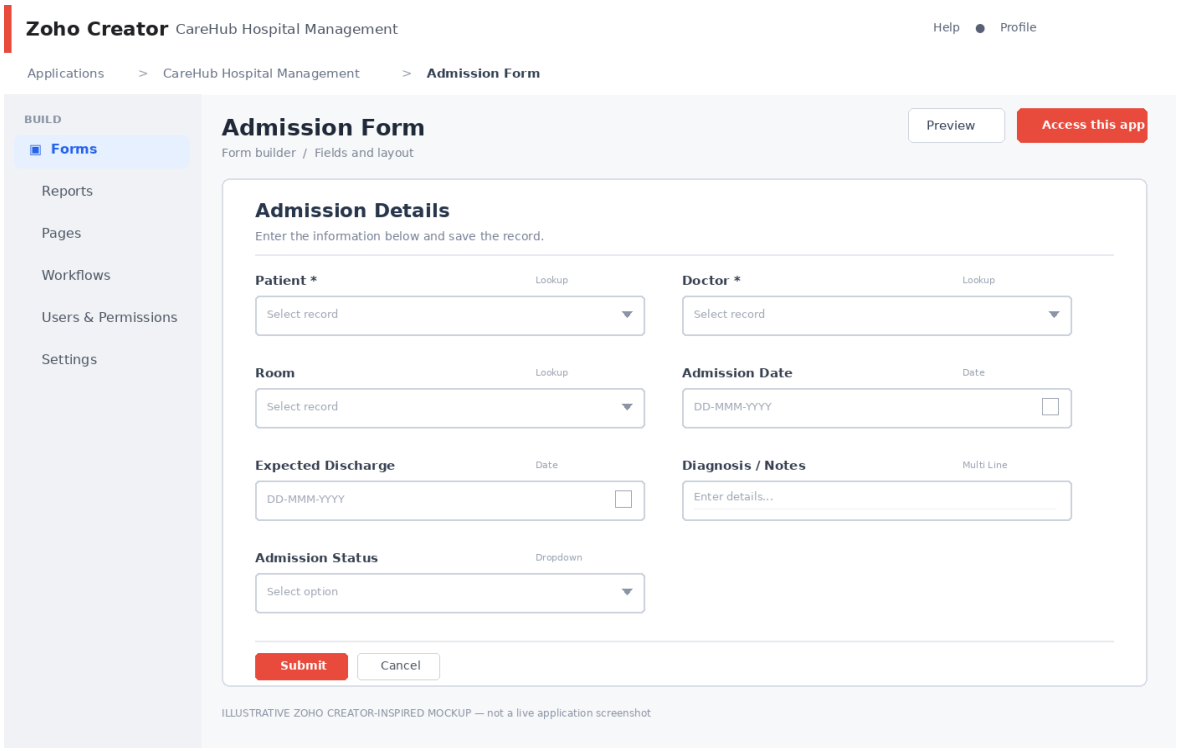

Figure 3: Illustrative Admission form layout

4. Doctor Form

Stores clinician contact details, specialty, department, and availability for appointment and care allocation.

Main fields: Full Name, Specialization, Phone Number, Email, Department, Availability Status.

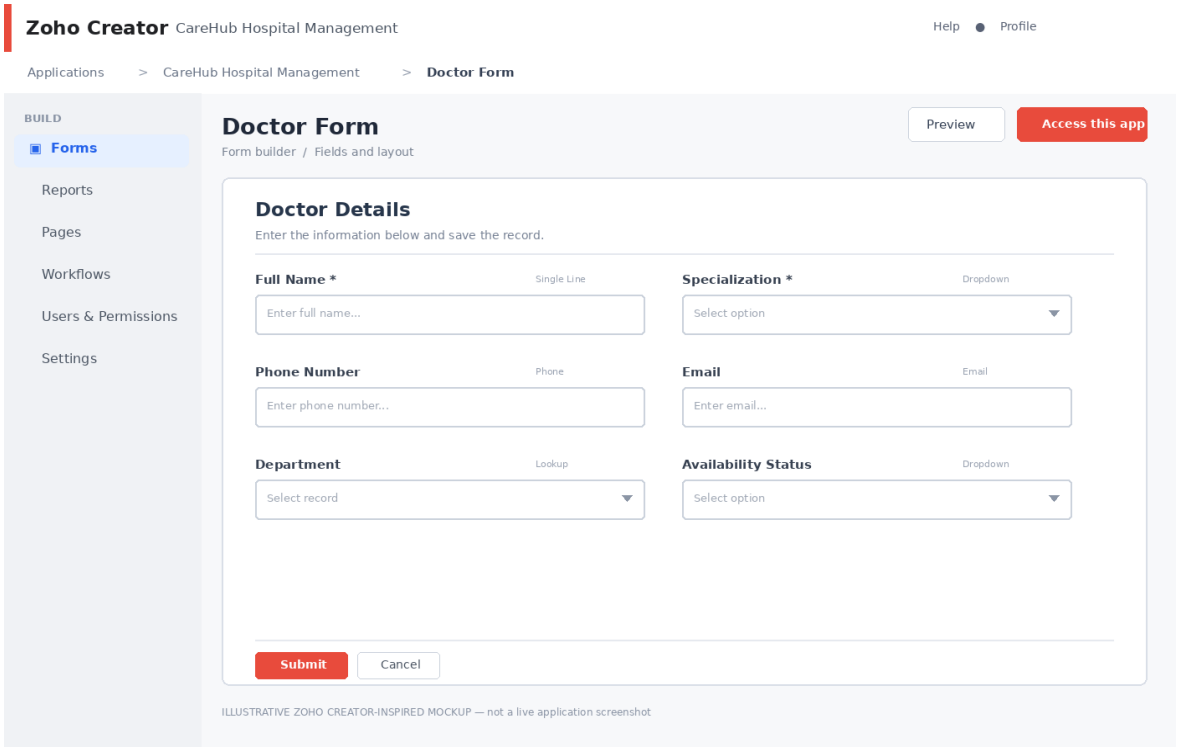

Figure 4: Illustrative Doctor form layout

5. Staff Form

Maintains hospital employee details for internal coordination and role-based organization.

Main fields: Full Name, Role, Department, Phone Number, Email.

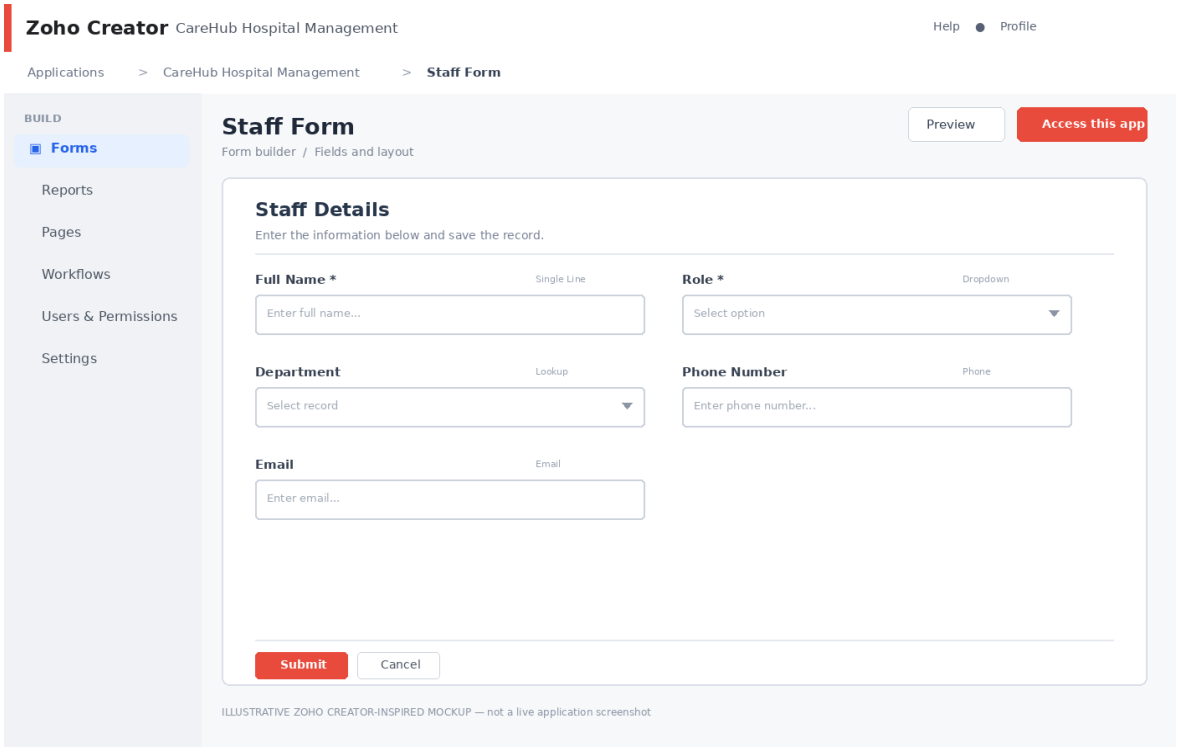

Figure 5: Illustrative Staff form layout

6. Department Form

Centralizes department information and contact details for consistent organization of staff.

Main fields: Department Name, Head / Coordinator, Contact Number, Email.

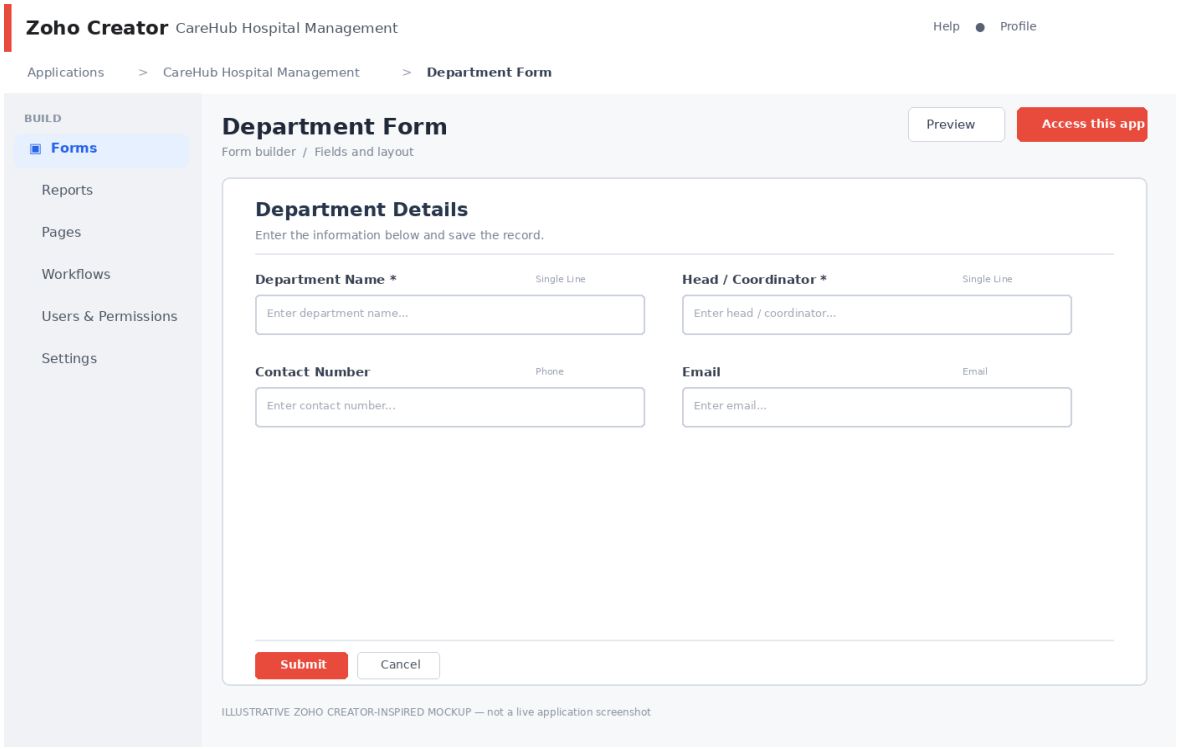

Figure 6: Illustrative Department form layout

7. Prescription Form

Links a patient, doctor, and medicine with clear dosage instructions and prescription timing.

Main fields: Patient, Doctor, Medicine, Dosage, Frequency, Duration, Prescription Date.

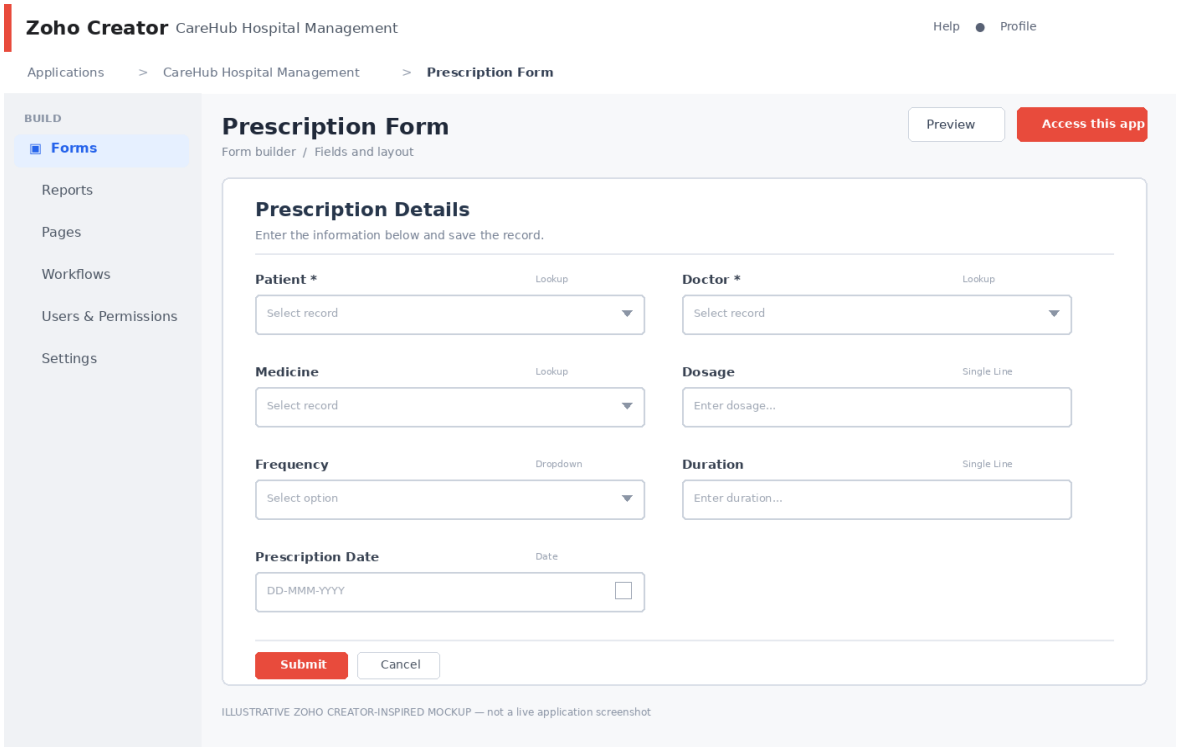

Figure 7: Illustrative Prescription form layout

8. Medicine Form

Tracks medicine inventory, stock quantity, pricing, and expiry details.

Main fields: Medicine Name, Category, Quantity in Stock, Unit Price, Expiry Date.

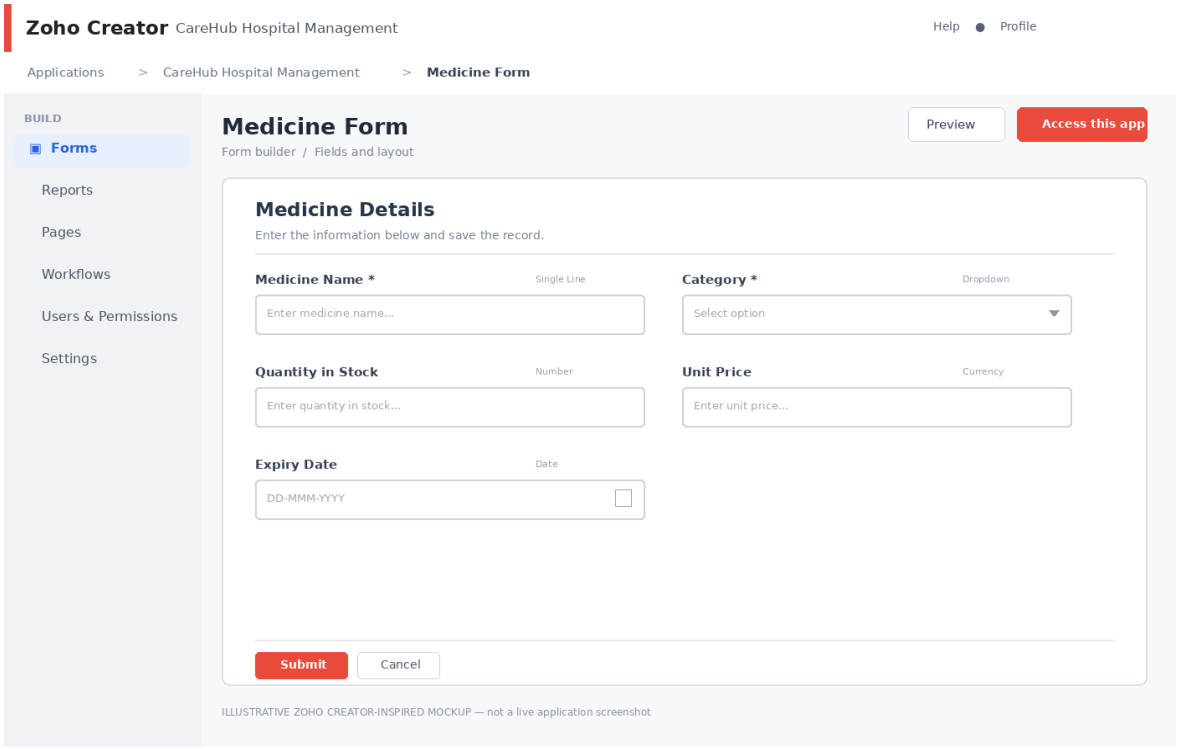

Figure 8: Illustrative Medicine form layout

9. Patient Form

Keeps patient demographic and contact details, blood group, address, and emergency contact information.

Main fields: Full Name, Age, Gender, Phone Number, Email, Blood Group, Address, Emergency Contact.

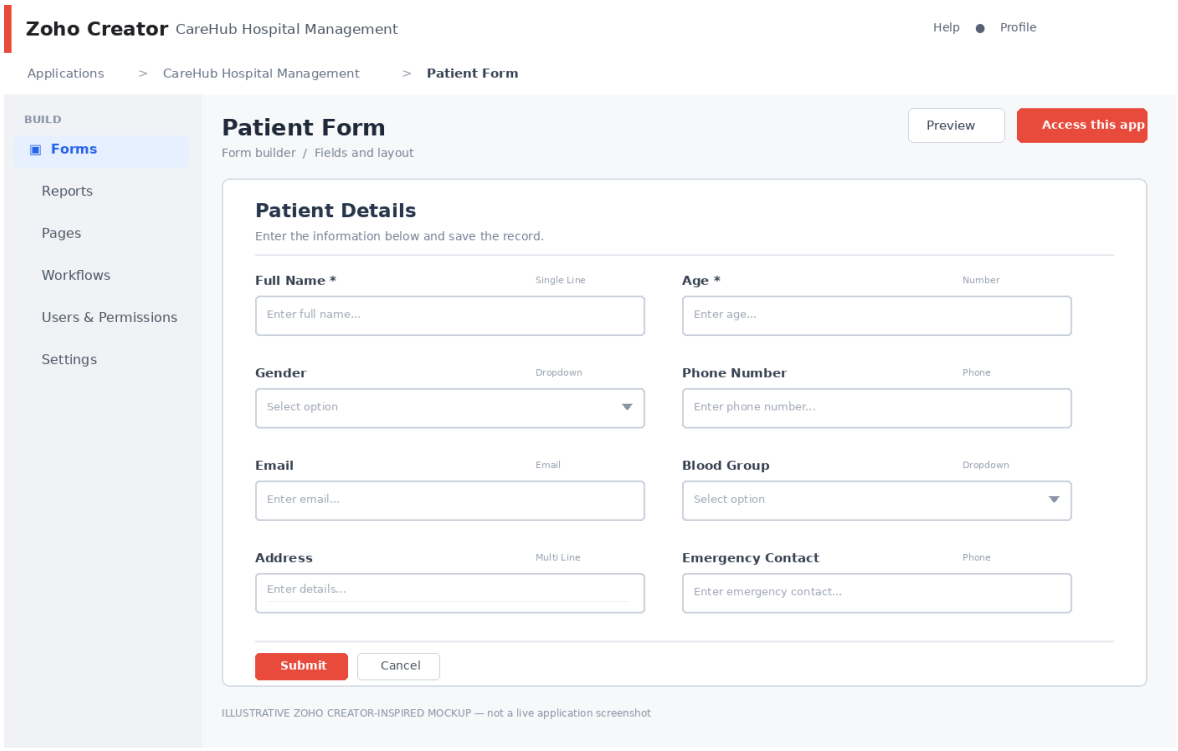

Figure 9: Illustrative Patient form layout

10. Room Form

Maintains room identifiers, type, floor, availability, and daily charge for admission planning.

Main fields: Room Number, Room Type, Floor, Availability, Daily Charge.

4. Recommended Field Configuration

Form	Suggested field types	Validation / design consideration
Appointment	Lookup, Date, Time, Multi-line, Dropdown	Require patient, doctor, date and status.
Billing	Lookup, Currency, Dropdown, Date	Amount should be non-negative; use controlled payment states.
Admission	Lookup, Date, Multi-line, Dropdown	Discharge date should not precede admission date.
Doctor	Text, Phone, Email, Lookup, Dropdown	Validate contact information and department selection.
Staff	Text, Phone, Email, Lookup	Use consistent staff-role choices.
Department	Text, Phone, Email	Keep department names consistent and avoid duplicates.
Prescription	Lookup, Text, Date	Require patient, doctor, medicine and dosage details.
Medicine	Text, Number, Currency, Date	Quantity cannot be negative; record expiry dates.
Patient	Text, Number, Phone, Email, Dropdown, Address	Validate age and contact details; restrict access to personal data.
Room	Text, Dropdown, Number, Currency	Room number should be unique; daily charge cannot be negative.

5. Relationships Between Forms

- Patient records may be referenced by appointments, billing, admissions, and prescriptions.
- Doctor records can be linked to appointments, admissions, and prescriptions.
- Departments can organize doctors and staff.
- Admissions can reference room assignments and billing entries.
- Medicine records can be linked to prescriptions.
- Room availability should be updated when an admission starts or ends.

6. Suggested Testing

- Save a valid record for each form and confirm it appears in its report.

- Test required fields by attempting to save a record with key information missing.
- Check date rules, numeric limits, email format, and phone number validation.
- Verify lookup fields display the correct related records.
- Confirm status fields use consistent options.

7. Result

Ten functional forms have been outlined: Appointment, Billing, Admission, Doctor, Staff, Department, Prescription, Medicine, Patient, and Room. Together, they provide a structured foundation for capturing and retrieving hospital operational information.

Important: The included images are illustrative mockups, not screenshots from a live Zoho Creator application. Replace them with screenshots of your own forms after creating them in Zoho Creator.
