LAB EXERCISE 1

FORM CREATION FOR HOSPITAL MANAGEMENT SYSTEM

Aim

To design and configure the main data-entry forms of a Hospital Management System in Zoho Creator.

Overview

This exercise develops the data-entry structure for a Hospital Management System in Zoho Creator. Dedicated forms collect information about patients, appointments, clinical staff, admissions, billing and hospital resources.

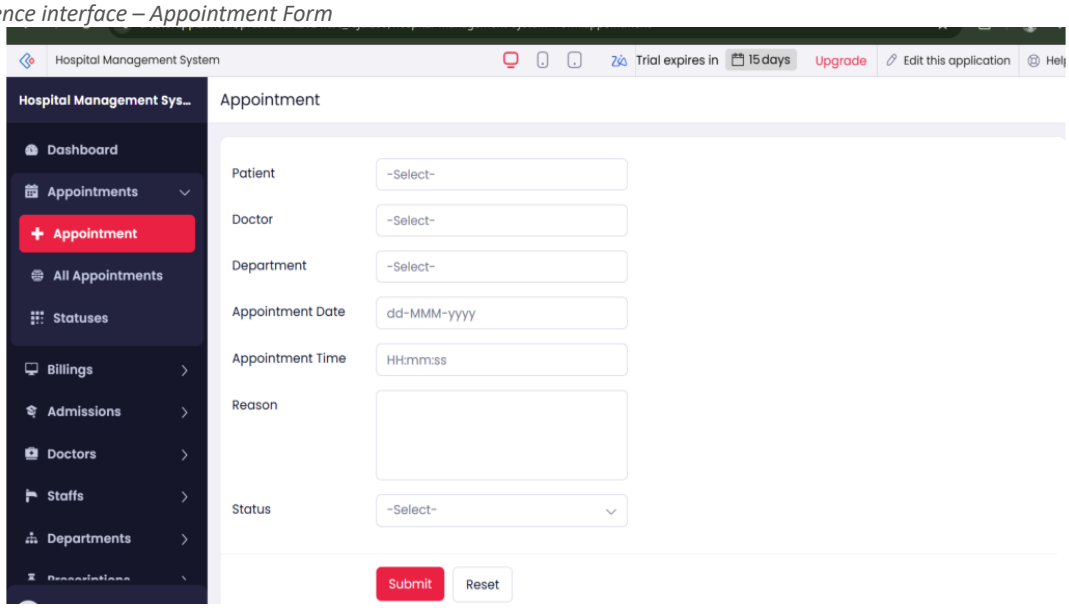

Forms Developed

The following ten form areas are illustrated with cropped reference screenshots.

1. Appointment Form

This screen supports consultation booking by recording the patient, doctor, department, date, time, visit reason and appointment status.

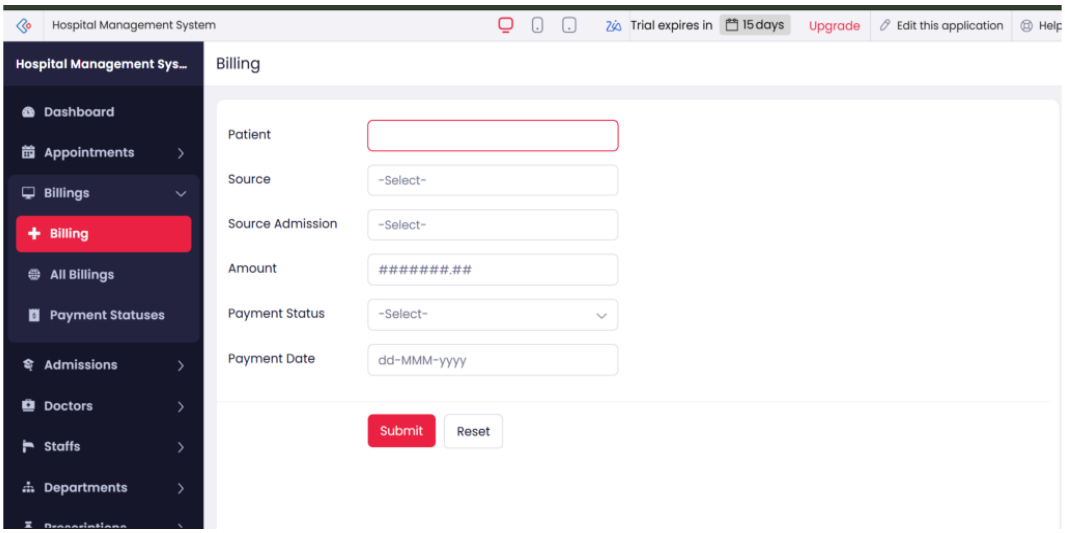

Reference interface – Appointment Form

2. Billing Form

Patient-related charges can be entered here. The form records the billing source, linked admission when relevant, amount, payment status and payment date.

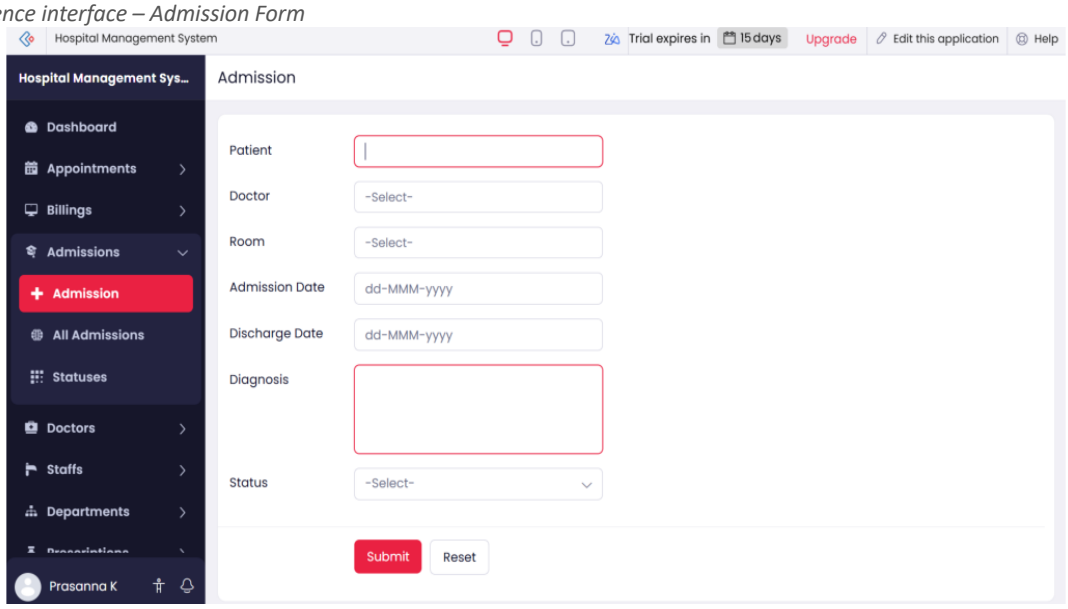

Reference interface – Billing Form

3. Admission Form

This page documents an inpatient stay, connecting the patient with a doctor and room and storing admission date, discharge date, diagnosis and status.

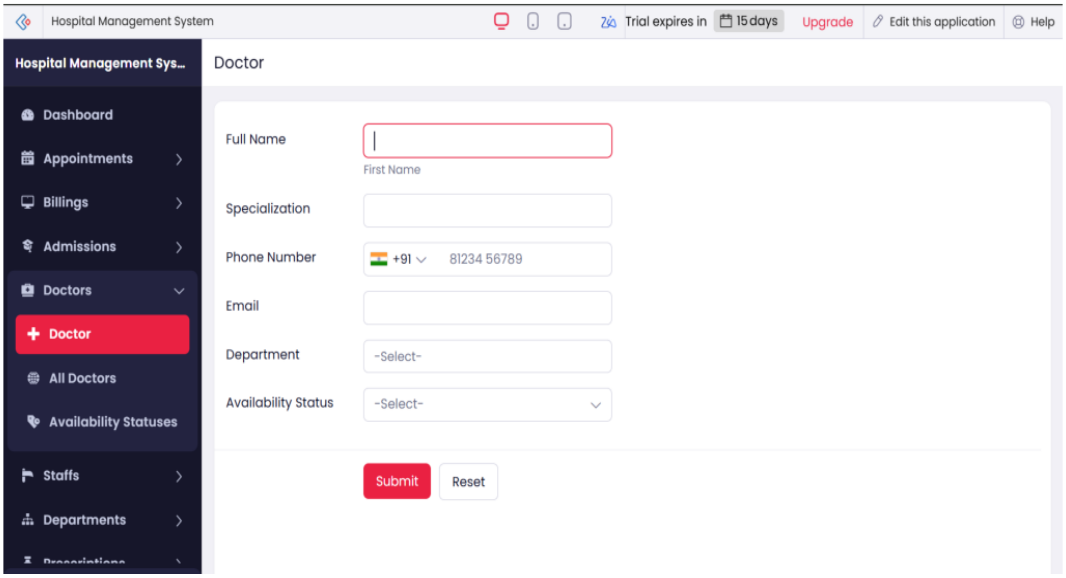

Reference interface – Admission Form

4. Doctor Form

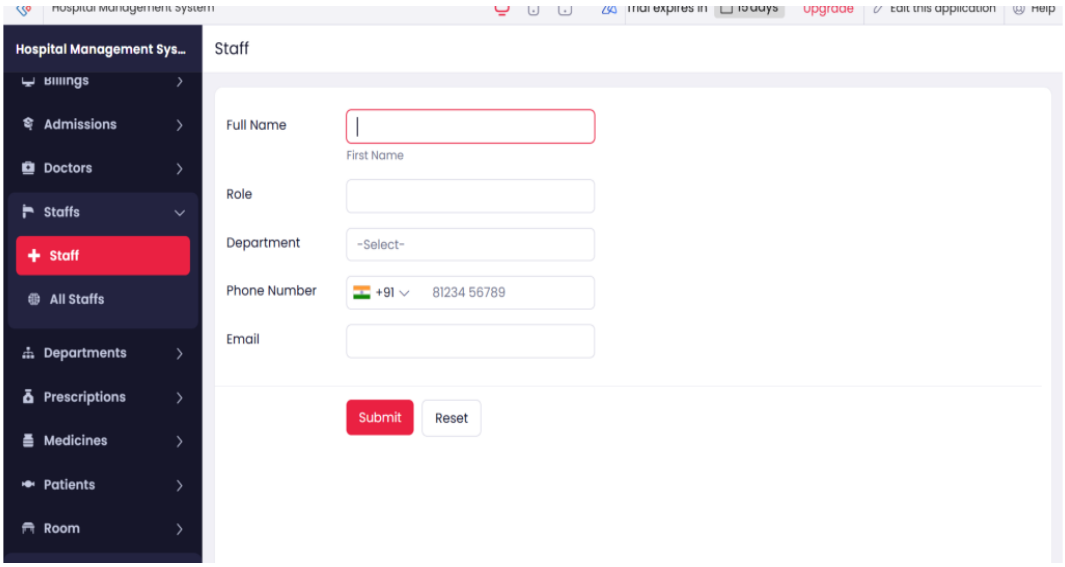

The doctor directory stores each practitioner's name, specialization, phone number, email, department and availability.

Reference interface – Doctor Form

5. Staff Form

Employee records include the staff member's name, job role, department, phone number and email address.

Reference interface – Staff Form

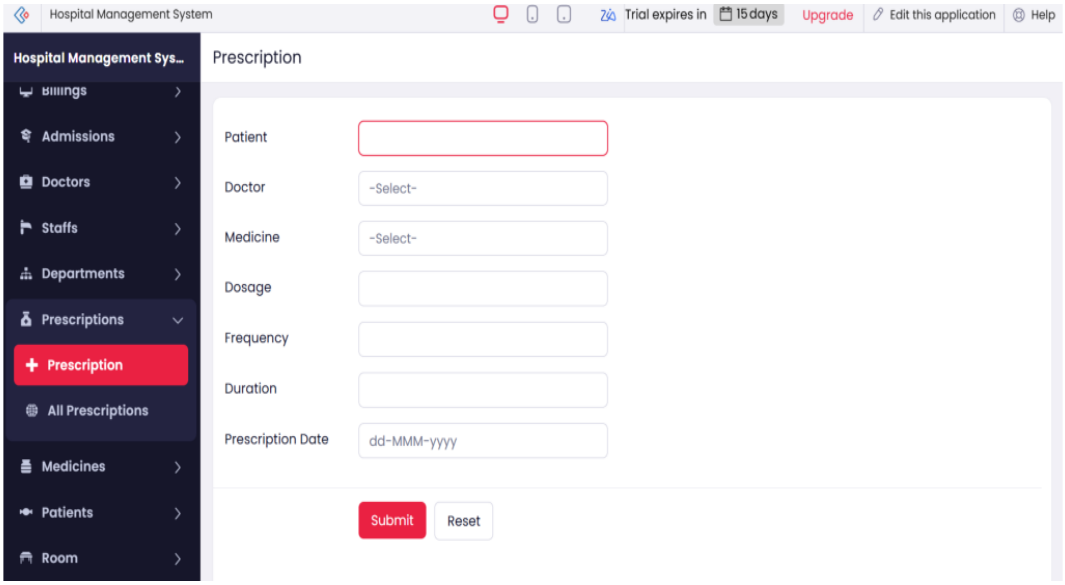

6. Department Form

This section is intended to organise hospital department information. The supplied reference screen appears to use staff-style fields, so confirm the actual department fields in the live application.

7. Prescription Form

Prescription entries connect a patient, doctor and medicine, with fields for dosage, frequency, duration and prescription date.

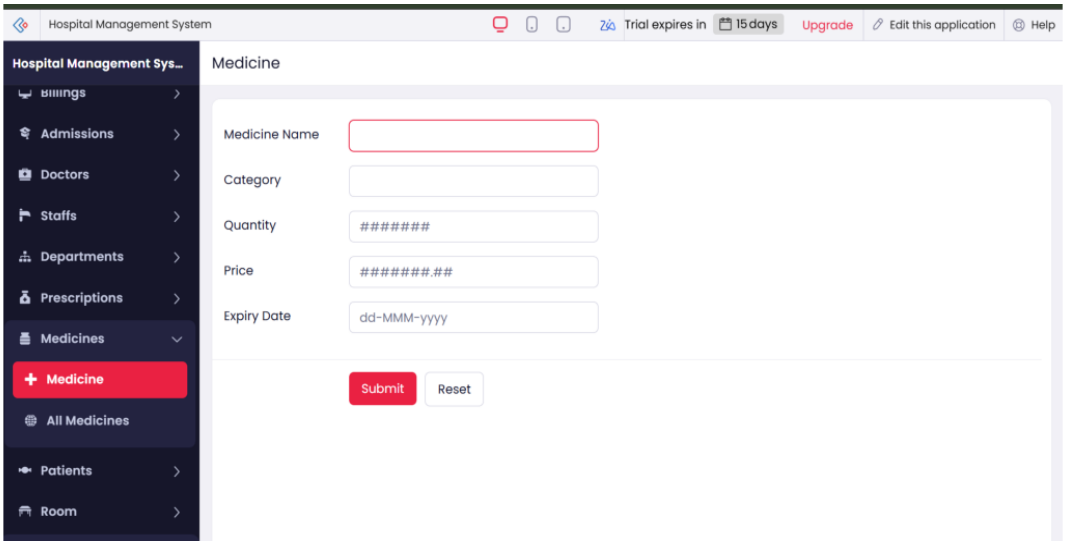

Reference interface – Prescription Form

8. Medicine Form

The inventory form records medicine name, category, stock quantity, price and expiry date.

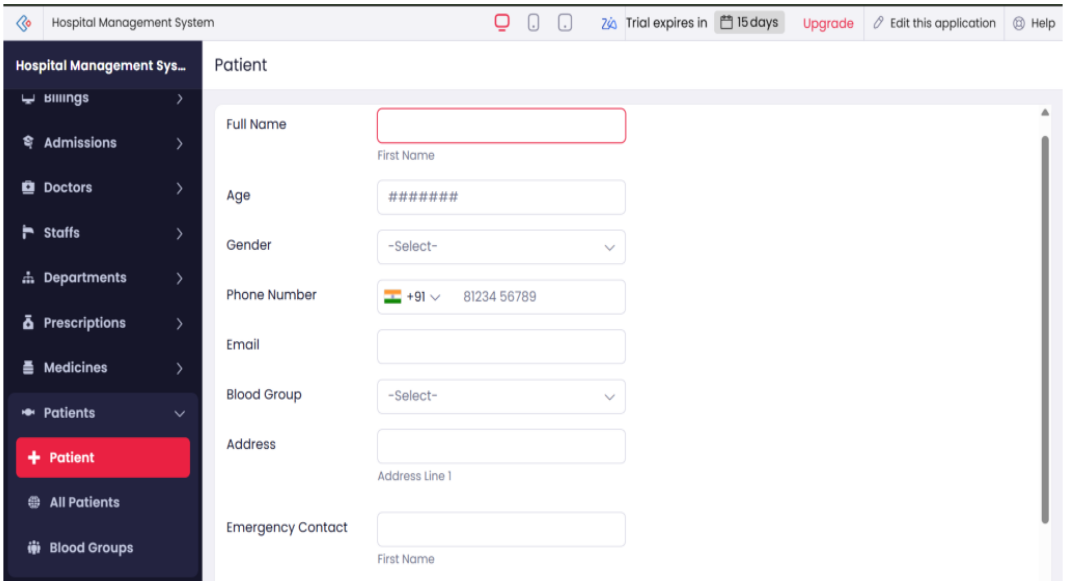

Reference interface – Medicine Form

9. Patient Form

Patient profiles include name, age, gender, telephone, email, blood group, address and emergency-contact information.

Reference interface – Patient Form

10. Room Form

Room records contain the room number, room type, floor, availability and daily charge.

Reference interface – Room Form
