LAB EXERCISE 3
APPLICATION DEVELOPMENT WITH THE ZIA AI ASSISTANT FOR A HOSPITAL MANAGEMENT SYSTEM

Aim

To create a Hospital Management System in Zoho Creator with the Zia AI Assistant by describing the application requirements and reviewing the generated use cases, data structure and interface.

Procedure

Sign in to Zoho Creator and open the Zia App Builder. Provide a prompt describing the Hospital Management System, its main modules, user roles and access permissions. Examine the proposed use cases and data model, proceed with application generation, and then open the created application. Review the dashboard and appointment reports to check the generated output.

Zia AI Assistant Prompt

The Zia prompt requests a simple Hospital Management System for a college laboratory demonstration. It specifies roles such as Admin, Doctor, Receptionist, Nurse and Pharmacist, with suitable permissions for each role.

a college laboratory demonstration.

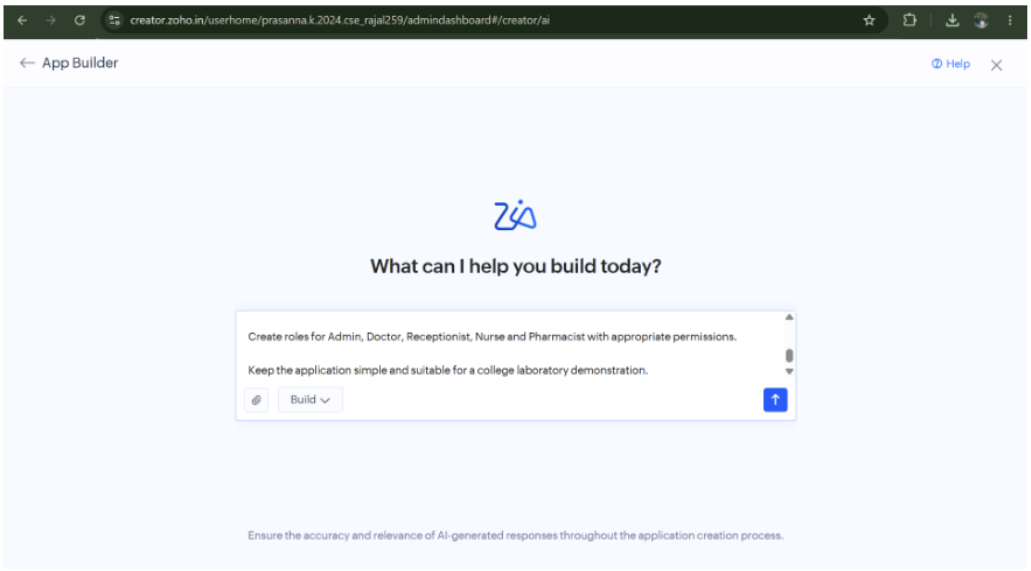

Figure 1: Prompt entered in the Zia AI Assistant.

Data Model and Hospital Use Cases

The generated design identifies hospital activities including patient registration, appointment booking, room assignment, prescription handling and billing. The data model displays entities and the fields associated with them.

Figure 2: Hospital use cases and the generated data model.

Zia-Generated Application Confirmation

After processing the request, Zia displays a confirmation that the application has been generated. The

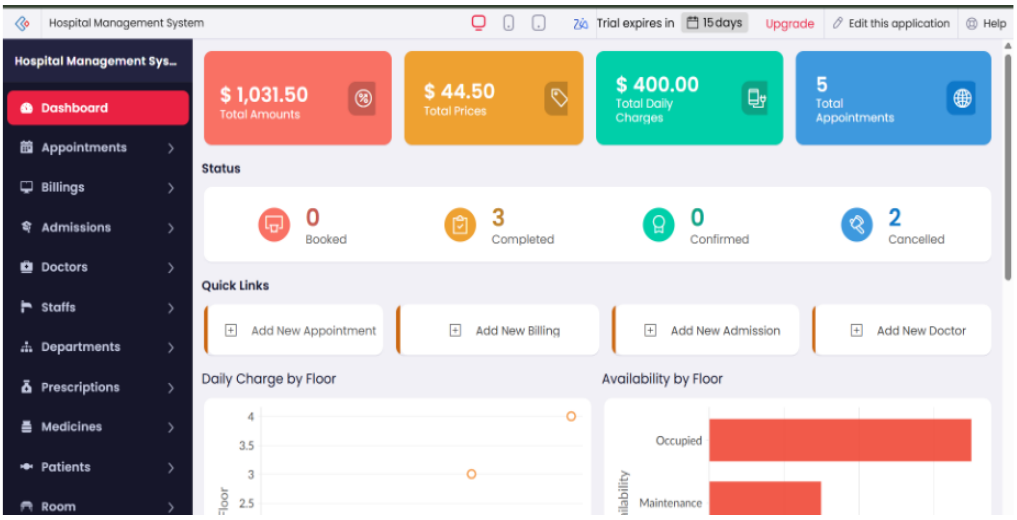

builder also shows completed areas such as use cases, application components, user permissions, blueprints and workflows.

Accessing the Hospital Management System Dashboard

The generated application can be opened from the builder. Its navigation panel provides entry points to the hospital modules, while the main dashboard presents quick actions, floor-related charts and appointment information.

Dashboard Summary and Analytics

The dashboard summary includes cards for financial amounts, prices, daily charges and the appointment count. It also displays appointment status indicators, shortcuts for adding records and graphical summaries such as daily charge and room availability by floor.

Viewing the Complete Appointment List

The complete appointment view brings multiple bookings together in a list. Each row connects appointment information with patient and doctor references, department, date, time and reason.

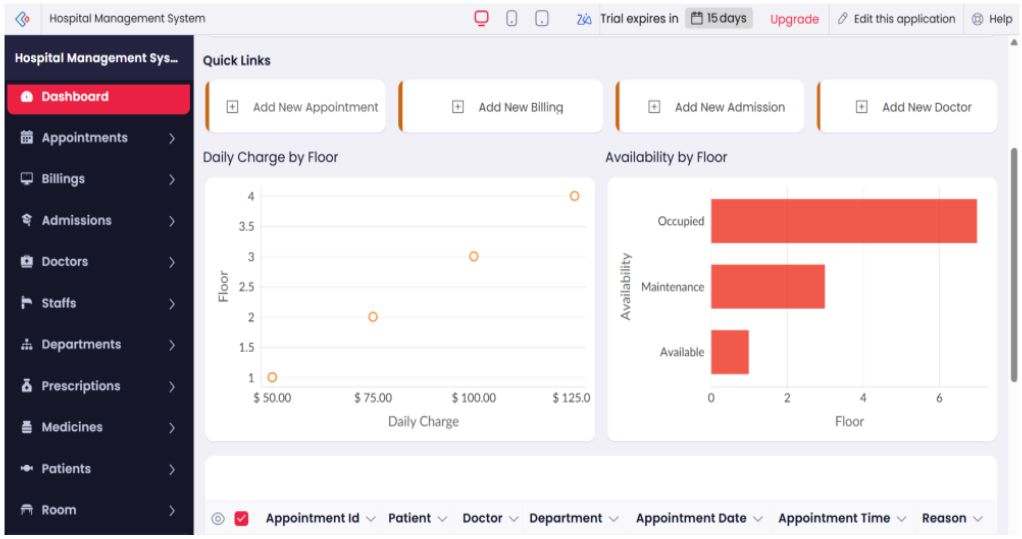

Figure 6: Complete list of appointment entries.

Viewing Appointment Records

The appointment report presents the booking details in a tabular layout. The visible columns include doctor, department, appointment date, appointment time, reason and status.

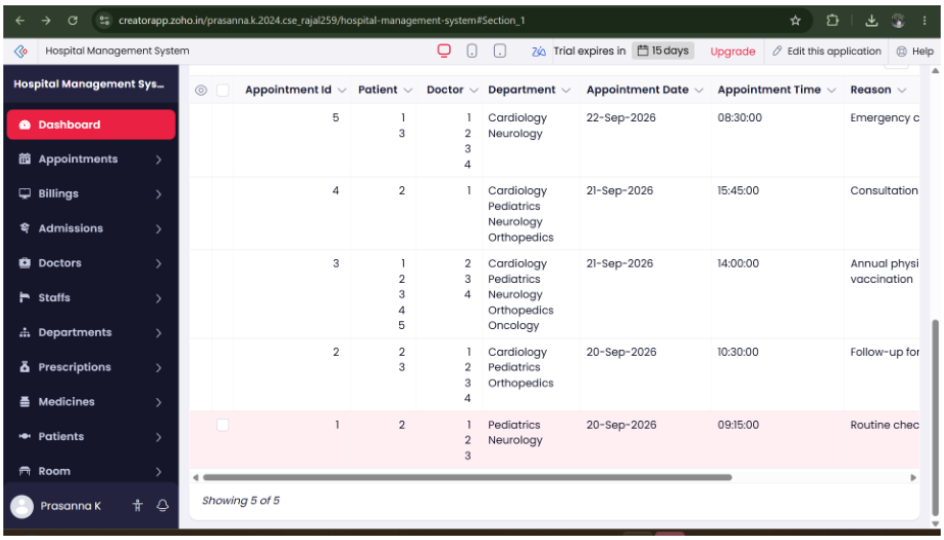

Figure 7: Appointment report in tabular format.

Result

The Hospital Management System was generated using the Zoho Creator Zia AI Assistant. The resulting application contains hospital use cases, a data model, application components, a dashboard and appointment-related views for the laboratory exercise.
