LAB EXERCISE 5
CREATING DASHBOARD PANELS AND CHARTS FOR A HOSPITAL MANAGEMENT SYSTEM

Aim

To configure a Hospital Management System dashboard in Zoho Creator by adding information panels, selecting chart formats and displaying appointment data through an embedded report.

Procedure

Open the Hospital Management System in Zoho Creator and enter the dashboard editing area. Configure panel elements for important values and labels. Choose suitable chart types, add chart components based on the Room data, and insert the existing All Appointments report. Arrange the components on the dashboard and review the completed summary and report sections.

Configuring Dashboard Panels

Dashboard panels present key values in a compact visual form. Their configuration options allow the display style, label and value presentation to be adjusted. Placing these panels together makes important hospital figures easier to notice.

Choosing a Chart Format

The chart selector offers multiple presentation styles, including Column, Stacked Column and Stacked Percentage Column. The selected format determines how the underlying hospital information is represented graphically.

Embedding the All Appointments Report

The Report component can be added from the dashboard builder. The existing All Appointments report is selected as its data source, after which it can be shown directly within the dashboard or accessed through a button.

Adding Room-Based Chart Components

Chart components are added to visualise information from the Room data. The dashboard editor allows these charts to be positioned alongside other elements so that multiple visual summaries can be viewed together.

Dashboard Summary and Appointment Status

The completed dashboard contains summary panels for Total Amounts, Total Prices, Total Daily Charges and Total Appointments. A separate status area shows Booked, Completed, Confirmed and Cancelled counts. The charts provide additional views of daily charges and floor-wise availability.

Displaying the All Appointments Report

The embedded report supplies the detailed records behind the dashboard summaries. It includes appointment-related patient, doctor, department, date, time, reason and status information in a tabular view.

Result

The Hospital Management System dashboard was configured in Zoho Creator using summary panels, appointment-status indicators, room-related charts and the All Appointments report. These components bring important hospital information together in a single dashboard view.
