ASSIGNMENT 02
BANK LOAN APPLICATION FORM — ADVANCED FIELDS USE CASE

Zoho Creator | Advanced Fields Lab Record

Aim

To extend the existing Bank Loan Application Form in Zoho Creator by incorporating all seventeen Advanced Fields, demonstrating automation, computed values, file/media handling, and structured lookups in a banking use case.

Procedure

Open the existing Loan Application & Pre-Screening Management application in Zoho Creator, extend Loan_Application_Form with the required Advanced Fields, configure the supporting Branches lookup and co-applicant details, verify field properties and validations, preview the form, and review generated values and the report after submission.

1. Branch Verification & Reference

The servicing branch lookup connects the loan request to a master Branches form. Selecting a branch allows its name, IFSC code, and manager details to be verified from the master reference instead of being entered as free text.

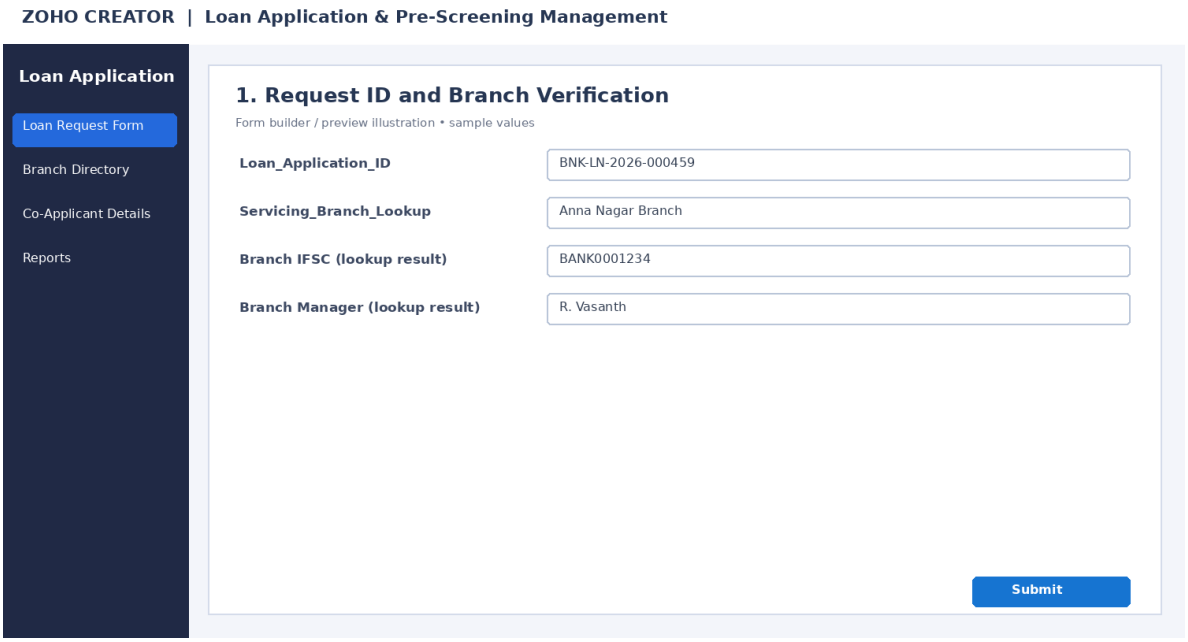

Figure 1: Loan Application ID and Servicing Branch Lookup — illustrative configuration

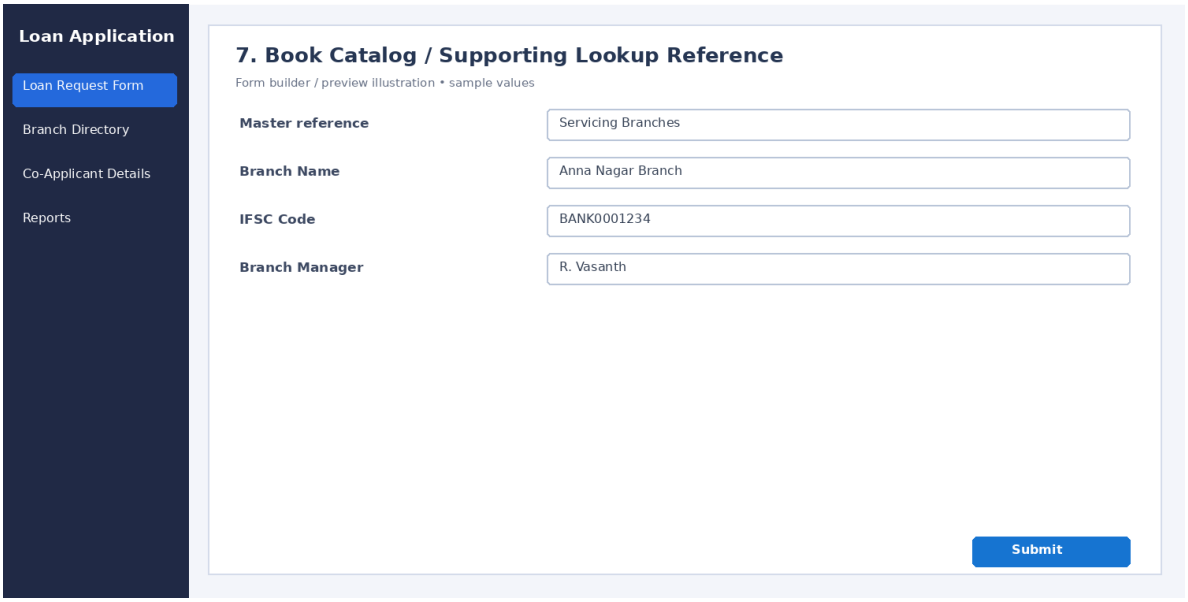

Figure 2: Master branch reference used by the lookup — illustrative preview

2. Loan Terms and Applicant Decisions

The Decision Box records whether the applicant already has a loan with the same bank. The Rich Text field presents terms and conditions inside the form, while Percent and Currency fields capture the offered interest rate and requested loan amount.

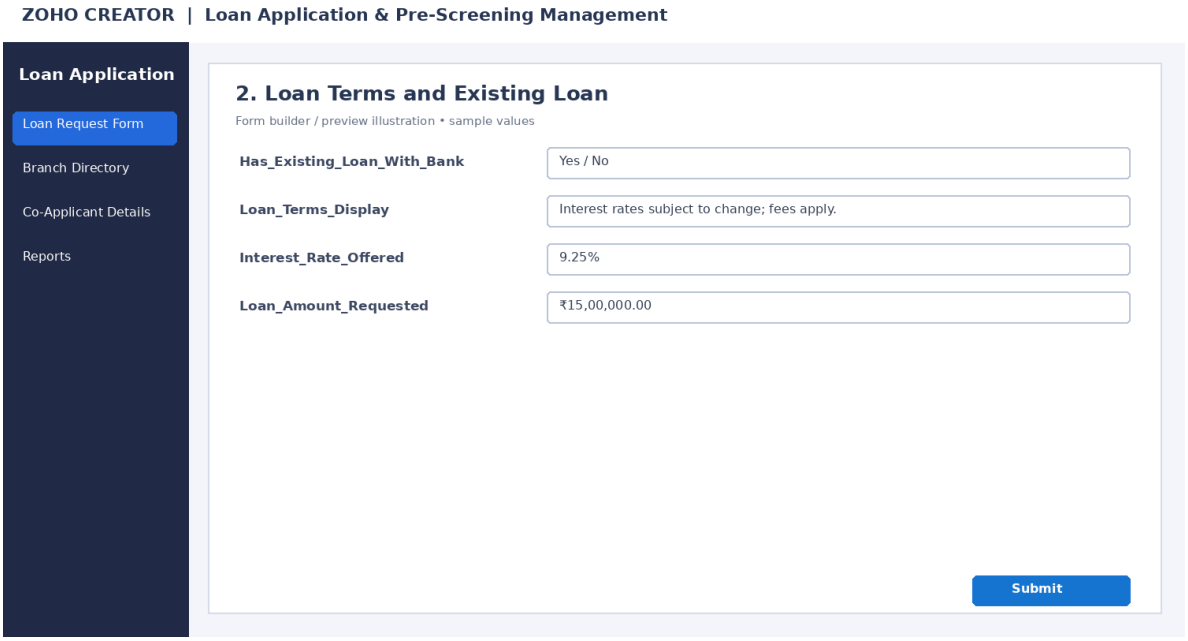

Figure 3: Existing-loan decision, loan terms, interest rate, and requested amount

3. Branch Verification & KYC

The Image field stores an applicant photo for KYC, the File Upload field accepts supporting income evidence, and the Decimal field records the debt-to-income ratio used during preliminary assessment.

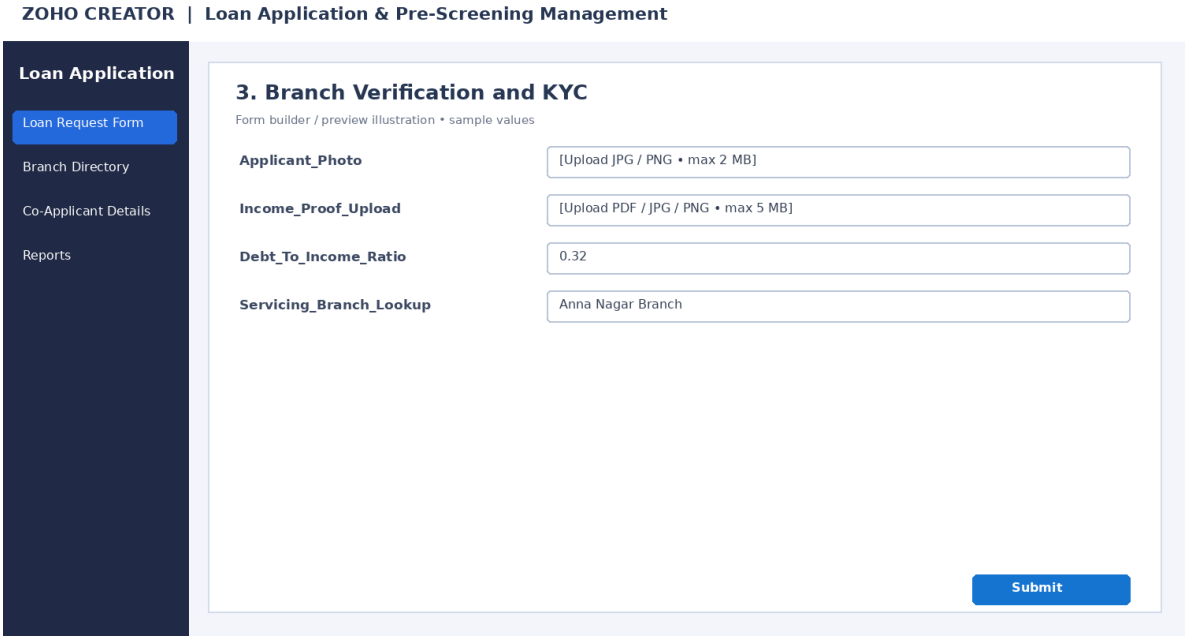

Figure 4: KYC and supporting-document fields

4. Joint Application & Media Details

The Co_Applicant_Details SubForm supports repeating co-applicant records within one application. The URL field stores the property listing for home loans; optional Video and Audio fields capture a property walkthrough and a short explanation of the loan purpose.

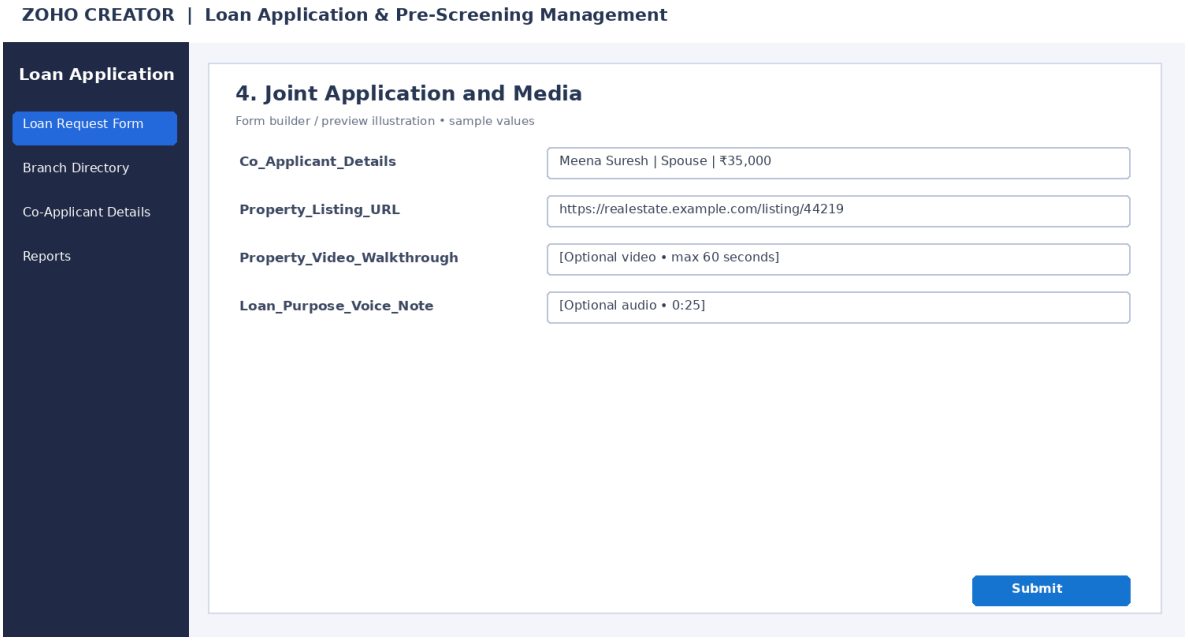

Figure 5: Co-applicant details and optional media fields

5. EMI Computation

The Formula field is configured as read-only and recalculates the estimated monthly installment when the loan amount, interest rate, or tenure changes. The assignment describes the EMI as a computed value; the exact formula should be configured and tested in Zoho Creator.

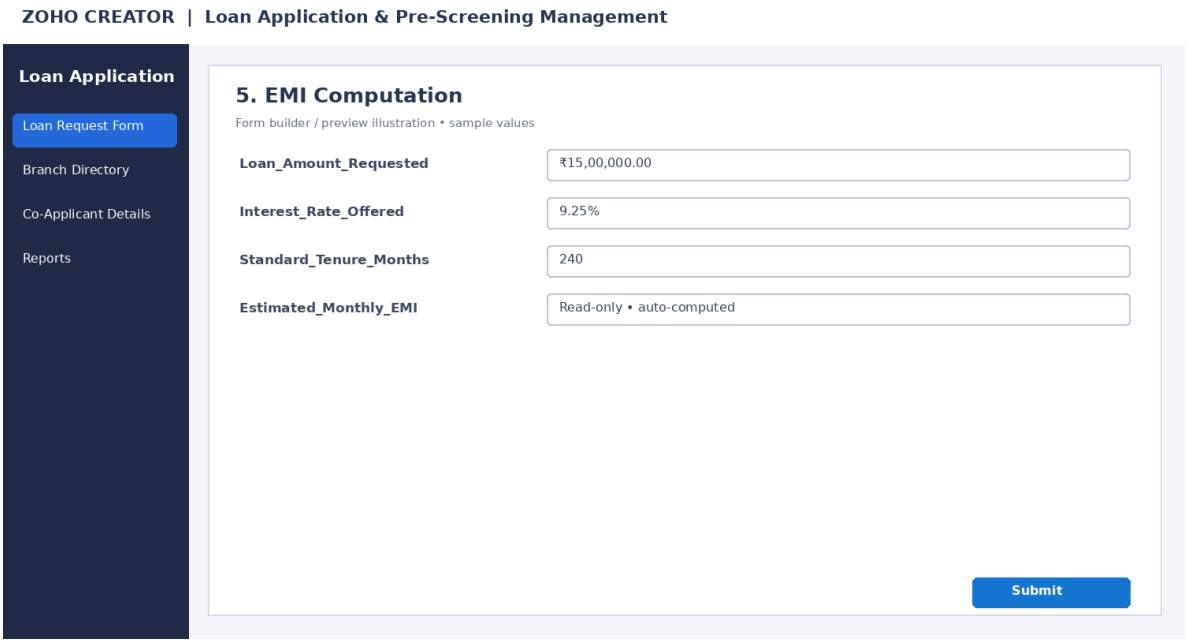

Figure 6: Estimated Monthly EMI formula field — illustrative preview

6. Declaration & System-Generated Values

The Rich Text terms are reviewed before the applicant provides a digital signature. On submission, the Date-Time field records the timestamp, Auto Number creates a unique application reference, and the QR/Barcode field is configured to encode that reference for tracking.

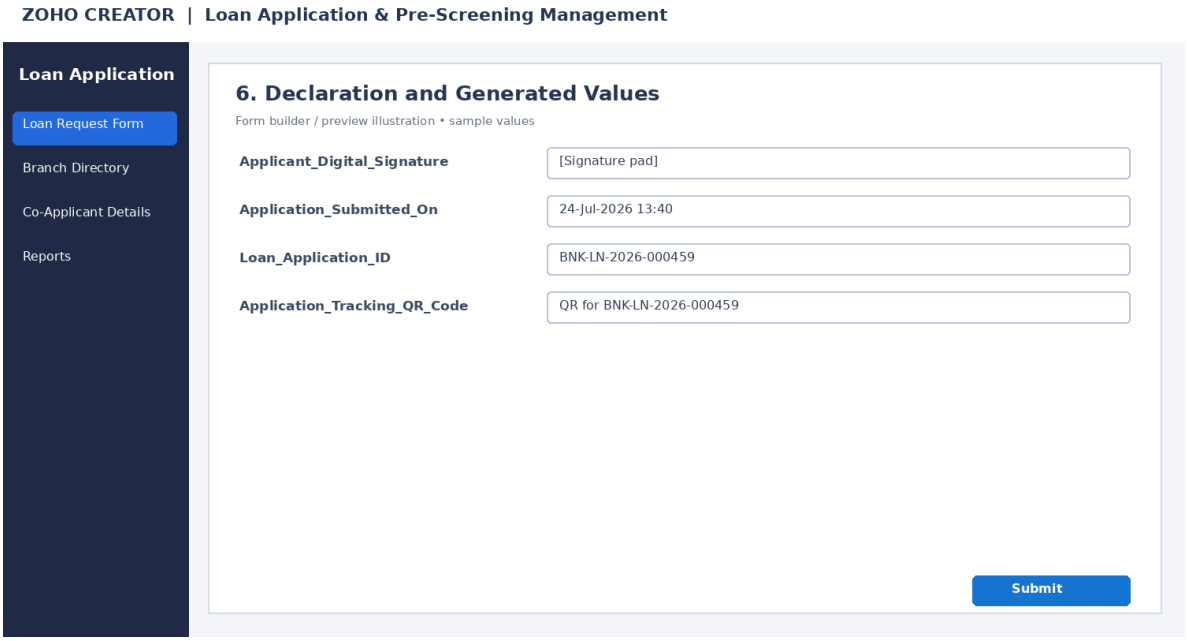

Figure 7: Signature, submission timestamp, application ID, and tracking QR field

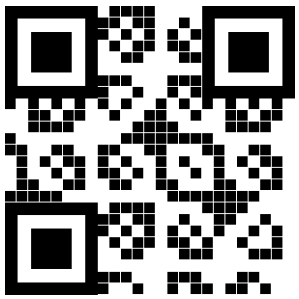

Figure 8: QR-style visual mockup for the sample application ID (not a scannable QR code).

7. Advanced Fields Used and Their Mapping

Advanced Field	Form Field Name	Purpose	Sample Value / Behaviour
Decision Box	Has_Existing_Loan_With_Bank	Captures Yes/No decision about another loan with the bank	Yes / No
Rich Text	Loan_Terms_Display	Displays formatted terms and conditions	Interest rates subject to change
URL	Property_Listing_URL	Captures property listing link for home loans	realestate.example.com/listing/44219
Image	Applicant_Photo	Captures passport-size photo for KYC	applicant_photo.jpg
Percent	Interest_Rate_Offered	Captures offered interest rate	9.25%
Currency	Loan_Amount_Requested	Captures requested amount in INR	₹15,00,000.00
Decimal	Debt_To_Income_Ratio	Captures debt-to-income ratio	0.32
Date-Time	Application_Submitted_On	Records exact submission date/time	24-Jul-2026 13:40 (sample)
SubForm	Co_Applicant_Details	Repeating co-applicant name, relationship, income	Meena Suresh — Spouse — ₹35,000
Lookup	Servicing_Branch_Lookup	Selects branch from master Branches form	Anna Nagar Branch
Signature	Applicant_Digital_Signature	Captures signed declaration	Signed
File Upload	Income_Proof_Upload	Uploads salary slips, Form 16, bank statements	income_proof_bundle.pdf
Audio	Loan_Purpose_Voice_Note	Optional voice note for loan purpose	voice_note_05.mp3 (0:25)
Video	Property_Video_Walkthrough	Optional property walkthrough	property_walkthrough.mp4 (0:55)
Auto Number	Loan_Application_ID	Generates unique sequential reference	BNK-LN-2026-000459 (sample)
Formula	Estimated_Monthly_EMI	Computes estimated monthly installment	Auto-computed
QR/Barcode	Application_Tracking_QR_Code	Encodes application ID for tracking	BNK-LN-2026-000459

8. Validation & Configuration Rules

- Servicing_Branch_Lookup connects to a master Branches form and uses type-ahead selection.
- Co_Applicant_Details allows 0–3 rows per application.
- Income_Proof_Upload accepts PDF, JPG, and PNG up to 5 MB.
- Applicant_Photo accepts JPG and PNG up to 2 MB.
- Property_Video_Walkthrough is limited to 60 seconds and 50 MB.
- Interest_Rate_Offered is restricted to 7–18 percent.
- Loan_Amount_Requested accepts non-negative values and uses INR formatting.
- Estimated_Monthly_EMI is read-only and recalculates when relevant inputs change.
- Loan_Application_ID uses the prefix BNK-LN-, current year, and a six-digit auto-incrementing sequence.
- Application_Tracking_QR_Code is generated after the application ID is assigned.
- Applicant_Digital_Signature and Has_Existing_Loan_With_Bank are mandatory.

9. Workflow Summary

- Applicant completes the existing personal, contact, and employment sections.
- Loan officer verifies the servicing branch using the Lookup field.
- For joint loans, co-applicant details are entered as rows in the SubForm.
- Applicant uploads a photo and income proof, with optional property video and voice note.
- Applicant indicates existing-loan status and reviews the requested amount, interest rate, and computed EMI.
- Applicant reviews the terms and signs the declaration.
- On submission, the system records the timestamp, generates the application ID, and creates the tracking QR code.
- Loan officer reviews the report, verifies documents, evaluates affordability, and tracks the application through the approval stages.

10. Expected Learning Outcomes

- Understand the purpose and use case for all seventeen Advanced Fields in Zoho Creator.
- Configure Lookup fields for cross-form verification and SubForms for repeating co-applicant data.
- Use Formula and Auto Number fields for calculations and unique identifiers.
- Configure file and media fields with appropriate format, duration, and size restrictions.
- Understand how QR/Barcode fields can support application tracking.

Result

The report design extends the Bank Loan Application Form with the seventeen Advanced Fields specified in Assignment–07. It documents the field mapping, branch lookup, joint application details, EMI computation, media handling, declaration, validation rules, and application tracking. The Zoho Creator application must be implemented and tested before the result can be treated as verified.

Note: All form visuals in this report are generated illustrative mockups, not screenshots captured from a live Zoho Creator application. Replace them with actual screenshots if implementation evidence is required.
