ASSIGNMENT 04
BANK LOAN APPLICATION COMMAND CENTER
PAGE ELEMENTS USE CASE

Zoho Creator | Page Builder Configuration and Visualization

1. Aim

To design and build a single internal Command Center Page in Zoho Creator for the Bank Loan Application application, demonstrating all eleven Page Builder elements: Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets, and Viewer.

2. Problem Statement

Loan officers need a unified workspace to track progress against monthly disbursal targets, search for applicant records, move applications through verification stages, and view KYC or income documents without switching between reports, attachments, and physical files.

3. Scope of the Use Case

- Application Name: Loan Application & Pre-Screening Management
- Page Name: Loan_Command_Center_Page
- Primary Users: Loan Officers, Branch Manager, Credit Assessment Team
- Underlying Form/Report: Loan_Application_Form, Loan_Application_Report, LoanType_Distribution_Chart
- Objective: Combine monitoring, searching, processing, and reference material in one internal workspace

4. Page Elements Used and Their Mapping

Page Element	Element Name	Purpose	Placement
Panel	Command_Center_Main_Panel	Primary container for all page elements	Wraps the full page
Board	Loan_Status_Board	Drag-and-drop application processing stages	Central workspace: Submitted, Document Verification, Credit Check, Approved, Disbursed, Rejected
Chart	LoanType_Distribution_Chart_Widget	Live application counts by loan type	Top-right, beside Gauge
Gauge	Monthly_Disbursal_Target_Gauge	Progress toward monthly disbursal target	Top-left overview strip
Search	Applicant_Search_Bar	Search by applicant name, application ID, or contact number	Top of page
Form	Quick_Counter_Loan_Intake_Form	Enter walk-in applicant details	Right-side expandable panel
Report	Full_Loan_Applications_Report	Detailed row-level review and export	Below Board
Snippets	Loan_Terms_Eligibility_Snippet	Reusable loan terms and eligibility reference	Sidebar
Button	Send_Document_Reminder_Button	Send reminders for missing KYC or income proof	Above Board, near document verification
Widgets	OfficerAvailability_And_InterestRate_Widgets	Officer availability and current interest-rate slabs	Bottom operations strip
Viewer	KYC_Income_Document_Viewer	View applicant's uploaded KYC or income proof	Sidebar below Snippets

5. Page Layout and Procedure

Section 1 — Overview Strip

Place the Monthly Disbursal Target Gauge, Loan Type Distribution Chart, and Applicant Search Bar at the top of the page. The gauge shows progress against the monthly target, the chart summarizes applications by loan type, and search supports quick lookup.

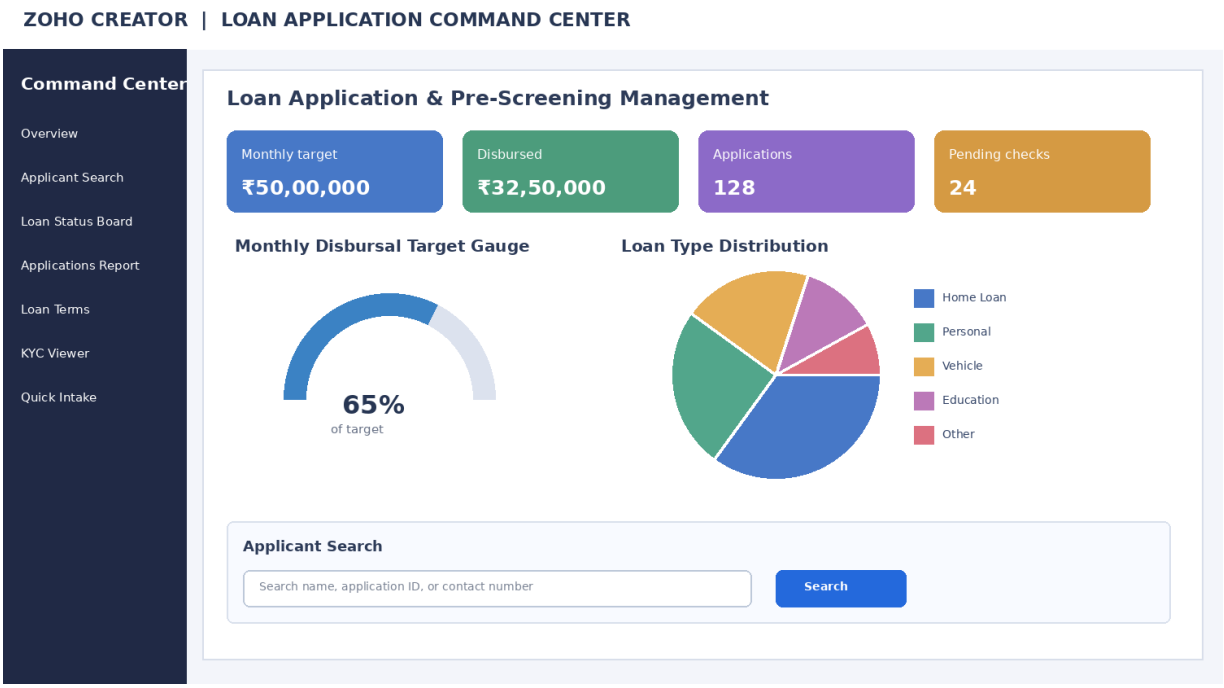

Figure 1: Illustrative Command Center Overview with Gauge, Chart and Search

Section 2 — Processing Workspace

Add the Send Document Reminder Button near the Document Verification stage. Configure the Loan Status Board with columns for Submitted, Document Verification, Credit Check, Approved, Disbursed, and Rejected. Moving a card should update the underlying Status field.

Figure 2: Illustrative Loan Status Board and Embedded Applications Report

Section 3 — Detailed Data

Embed Full_Loan_Applications_Report below the Board so officers can inspect record-level details and authorized branch managers can export records.

Section 4 — Reference and Quick Actions

Use the sidebar to display Loan_Terms_Eligibility_Snippet, KYC_Income_Document_Viewer, and the expandable Quick_Counter_Loan_Intake_Form. These support applicant queries, document checks, and walk-in application entry.

Figure 3: Illustrative Reference Sidebar, Document Viewer, Quick Intake and Operations Widgets

Section 5 — Operations Strip

Place OfficerAvailability_And_InterestRate_Widgets along the bottom of the page. The availability widget provides operational context, while the interest-rate widget displays current published rate slabs.

6. Configuration and Access Rules

- Panel: configure role-based visibility for loan officers and branch managers.
- Board: map each column to a Status field value; dragging a card updates the record.
- Chart: configure periodic auto-refresh to show the current loan-type mix.
- Gauge: allow the monthly target to be configured and visually indicate progress.
- Search: search Applicant Name, Application ID, and Contact Number simultaneously.
- Form: use the same validation rules as Loan_Application_Form.
- Report: restrict export-to-Excel capability to branch-manager-level accounts.
- Snippets: centrally manage loan terms and eligibility criteria so reused content stays consistent.
- Button: email reminders only to applicants flagged as missing KYC or income proof.
- Widgets: refresh officer availability and display the bank's current published interest-rate slabs.
- Viewer: display the latest uploaded KYC or income-proof document for the selected applicant.

7. Workflow Summary

- The loan officer opens Loan_Command_Center_Page and reviews the Gauge and Chart.
- The officer searches for an applicant by name, application ID, or contact number.
- As checks proceed, the officer moves cards across the Loan Status Board.
- For missing documents, the officer uses the reminder Button to trigger emails.
- For walk-in applicants, the officer enters details using the Quick Counter Loan Intake Form.
- The branch manager reviews the full applications report and exports data when authorized.
- For applicant questions, staff consult the loan terms Snippet, interest-rate Widget, and document Viewer.

8. Expected Learning Outcomes

- Understand the purpose and correct use case for all eleven Page Builder elements.
- Combine Forms and Reports with Gauge, Chart, and Board elements in one dashboard.
- Use Search to navigate applicant records quickly.
- Use Snippets for consistent reusable content.
- Extend a page with Widgets and a Viewer for operational information and documents.

9. Deliverable and Result

The design documents the Loan_Command_Center_Page layout and maps all eleven required Page Builder elements to their functions and positions. To complete the practical exercise, build the page in Zoho Creator and capture actual screenshots showing the full Page Builder layout, Gauge and Chart with sample data, a Board drag-and-drop before/after interaction, and the Viewer displaying a sample KYC or income-proof document.

Note: The figures in this report are generated illustrative mockups, not screenshots from a live Zoho Creator account. Values shown are sample values.
